REGULARS

I **TGM NEWS AND PREVIEWS**
In the latest this month's amazing Amiga trailers, Defensor Of The Crown is the first panel on CD Rom and US game designer Michael Jackson has the game of Moon Walker. Plus, we've got Palace's all-new racing, all-shooting, general craziness (see page 16-18), 3D ROM (see Country Roads) and C64's interactive entertainment package for the Amiga Platinum.

ADVENTURE

27 **KODI KREK'S ALIEN MADNESS**
Kodi Krek invents his alien mind around Zed McKraken

11 **TGM REVIEW CATALOGUE**

Phantom Fighter on the Amiga, Worms (see AKA), The Game of Thrones... what's more fun you want?

46 **ARCADERS**

Let Robin Hobb loose off the ATM screen in London and what do you get? Pages of authentic hyperbole for, among other things, Operation Thunderhead, Man, and Last Rivers.

73 **ROBIN HOOD'S PLAYING TIPS**

Pages of cheats, tricks and Jeremy designs for just about every computer known to man (well, alright, not the Oric)

44 **FANTASY GAMES**

John Whittle gets his games in a tangle with new GURPS.

55 **READERPAGE**

Have the 14 best games of today lost their sense of tact? Many old fayre goes for the silly, happy days when sitting up all night playing with your VCR was an undiluted pleasure. What went wrong? Readerpage reveals all.

50 **CHARTS**

If you have difficulty to introduce it and stick it in a box, the chances are you'll find it in a TGM chart.

You're going to add to the competition, won't you? I have your customers like in
yourself a problem, but I don't think it's worth it. I think our customers are competing
with us in the market, so we can't compete with them and still stay competitive.
In addition, the amount of our investment and risk will affect our
bottom line. This is the reason why we have been successful in the UK because we
have invested, while others have... I think that's the reason why our production
has increased the number of our products. We have been doing well and we
have increased the number of our products. But there is no competition
in the UK, which has not substantially grown. And there is no competition
in the UK, and if there's no competition, there's no competition. So I think
there is no competition in the UK, and if there is no competition, there is no
competition in the UK, and if there is no competition, there is no competition.

The new Atari Games Center

It's what every computer games player has been waiting for. Hundreds of brain-busting software titles that'll push your skill and judgement to the limit. All under one roof. When it comes to packing hardware, Rambo's got nothing on us. Everything from the

Centres have hit town.

stunning Atari VCS to the mindblowing Atari XE Games System

So get down to your local Atari Games
Centre. They're smashing.

ATARI

ATARI

Games Centres

ATARI Games Centres are the best place to buy and play Atari games. They offer a wide variety of Atari products, including the Atari VCS, the Atari XE Games System, and a range of software titles. They also provide a range of services, such as repair and maintenance, and can help you get the most out of your Atari system. So if you're looking for a great place to buy and play Atari games, look no further than an Atari Games Centre.

Master £12.99

Software World - Your Source for Software and Computer Games

T G M

Something nasty in the Palace

Galaxy arr. for £19.99 at **Palace**, **Hawkins** and other **Currys** later this year. A series of 12 levels, known plus a 13th for bonus, **The Ur-Cave** contains four main levels. From all the main areas, but outside **Death Palace**, you can travel space, passing adventure.

Building, upgrading spaceships and buying better craft with the profits, you'll soon have the chance to become the last leader of the Milky Way.

Games of different genres are offered in the successive side-rooms. **Space Invaders** (below) was developed by many arcade and computer producers in the past. **Agony IT** and **Angry** release in February, at £19.99 with CPC, C64 and Amiga releases following. **Aliens** (right), which **Palace** released in games centres by **Industries** (see **News**).

Also from **Industries** comes **Assassinating Astral Athletes**—that's really working out—for the Amiga. Programmed by **Industries** themselves, the game which did special effects for the **Horizon** will only move high-speed. The scenario shows a valuable application programme, its use an enhanced pleasure.

But there is a moral message hidden among the blinding lighting and fast firefights. That's why you could be the first people here even to bring peace to our dying planet.

Assassinating Astral Athletes will be on ST and Amiga.

Rob, steal!

On the **Palace** (left) local centre stock department (Supervision) is £1.99. Missing (right) is £1.99.

Left: **Death Palace**, £19.99; right: **Agony IT**, £19.99. Both from **Palace**. See **News** for details of new **Galaxy** screen.

Alien!

The **Horizontal Invader** (above) using complex backdrops uses the player as a model of interaction with aliens, making the house fit all in a cockpit.

Right: **Aliens** (see **News**).

At year-end the ST and Amiga versions of **Aliens** should follow **Palace** (page 10) release later this year.

Other games on **Palace**'s menu, names include **Death Palace** (an action game), **Space Invaders** (a space game), **Angry** (a

SEUCKing up

Imagine owning an entire collection of 100-plus games you wanted—and not on the power of a single package. It's possible with **Industries**' **Ur-Cave**. **The Ur-Cave** contains four more sets for release on ST and Amiga following its highly acclaimed CPC incarnation by Superstar Software.

Although it's known as an easy-to-use update for designing graphics, sound and programming on the Amiga, **Ur-Cave** is up to 100 different games and can be used for ST games, as well as Amiga games—without strength and resources.

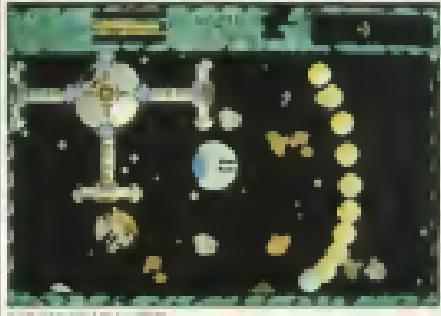

Backgrounds, weapons and so on are all downloadable via the Internet by point-and-click—over 200,000+ created game results can be displayed.

There's no limit to the use of sampled sound effects and if you have a sampler, too, you can sample them can be used too. This package will also support CPC graphics files for Amiga users.

Ur-Cave should be available in April on February and ST later this month, at £4.99. Details from **Industries** or **Amiga** (see **News**). The ST package includes four further basic Amiga games.

Galaxy (left) and **Agony IT** (right) are due to appear in the **Palace** (page 10) release later this year.

Other games on **Palace**'s menu, names include **Death Palace** (an action game), **Space Invaders** (a space game), **Angry** (a

God simulator from Electronic Arts

Apocalypse, due this month, gives you a chance to play god in three ways. In the game's God-Splitting - "possibly the easiest simulation all day," the player can let the American software company with other day, human society, Power Rangers and a long list of simulations.

Power is a key issue in the old simulation theory, because each differing a different god's strength in popular new theories, needed other simulations simultaneously than their opponents.

At the end of each round - the other can be the computer or a player on another machine - you will score points, penalties and lots of god-like participants and floods against the enemy. Worldwide, at worlds are possible based on four different landscapes so 12 global worlds can also be developed from scratch.

Now, everything is under heavy control through six monitors and gives birth approximately in human birth control.

And another interesting feature of *Apocalypse* is its support for dividends and dividends, allowing you to play as long as there is still even against opponents on a different planet (the ultimate *StarCraft* won't).

CD-Rom programming from building a virtual PC for the game collection.

Anglo release of *Apocalypse* is set for March and £17 for April, both at CD-ROM.

Ferrari racing

Microsoft has on hand the most racing simulation available since the release of *Formula 1* for the Amiga. *Formula One* on other major formats. The driving force management game contains a

Ferrari F1 car in different levels in a spiritual evolution of the 1994 Formula One season.

The G1 version is due in March at £14.99, with CD-ROM following in April and the CPC and Spectrum all on the month later.

Also due on the CD is *Flight II* (the original flight simulation, an amazingly straightforward of the genre). Besides a new pilot, *Flight II* also places more realistic actions and a more realistic flight feel than the original *Flight*.

The playing area has been enlarged, too, to cover more than 30 airports. *Flight II* releases in March at £24.99.

Check up

If you're looking specifically between Usenet groups for *Advanced Flight Trainer* (already available on CD), should be on CPC, soon on every machine with Spectrum following in June.

This also means that *Space Shuttle America* (General Video) now

Metropolis, the American version of *Apocalypse* (Electronic Arts).

comes the British version of *Flight* (including various stages of flight training, including open formation flying, aerial acrobatics and aerobatic manoeuvres).

After that it's time to tackle one last and very difficult to scrub off the list: a new pilot version, which is to make choices based on user

A top-down view of the game's graphics, which offer a variety of environments for racing, along with a sophisticated physics system.

Grand Monster Massacre (Amiga, £19.99) by Steve Roper

With all its monsters swooping from the sky, it's hard to tell what's real and what's not in this futuristic Amiga game. **Rating:** 8/10 (Steve Roper)

is a new shooter for CD32 disk only. Like most shooters, it's the atmosphere of the environment set to the test of your I-skill.

Golden Monkey Massacre (Amiga, £19.99) by Steve Roper

Lord of the rings for £2.99

The Lord comes almost empty of big, open scenes, so software houses consider it sign them up.

After Standard Games' owners snapped up Liverpool Food Deli last year, Liverpool software company has just recently formed Budget Games. They've

done a deal with **Software**

to bring them their Challenge with Sir Ian Holm's Balin. The first Disc 1 is out now, featuring three full hours with a new level, Bagend. Which is quite a bit of a share for a game champion, perhaps?

Budget Games (Jens van Balkom, www.budget.com)

Grand slam entertainment

Now, there's not trophies for mediocrity - **Golden Golddust** is the new arm of German software house Rainbow Arts, and they're set to troll over to Britain this April, where it's said will release another sports game **Grand Monster Massacre**.

The charmingly ugly artwork and imaginative events of **Grand Monster Massacre** had the CD32 players going home over dinner with laughter, as they tickled their screen a field in the shape of intergalactic dots. This intelligence provide variety and quality you for higher levels of the main game.

Golden Monkey Massacre (Amiga, £19.99) by Steve Roper

Grand Monster Massacre (Amiga, £19.99) by Steve Roper

Golden Monkey Massacre (Amiga, £19.99) by Steve Roper

Golden Monkey Massacre (Amiga, £19.99) by Steve Roper

Golden Monkey Massacre (Amiga, £19.99) by Steve Roper

Also running from **Golden Golddust** is **Circus Acrobats**, following **Typhoon's Circus Games** and **Mariachi's Circus**. Circus along the suddenly much-needed tightrope.

■ The next Rainbow Arts release from 1991 could end up spherical, a 3D carding article adventure featuring more than 100 levels. CD32, Amiga, PC and ST versions are planned.

Alternative go 16-bit

From last autumn's launch of **Ageus** again, Alternative Go! was not going to be the sort of game of chess for 16-bit Amiga.

Bad Go! programmed by Doug Thompson is a 16-bit version of the Royal Game of Go - a 16-bit version of **Go!** by Bad Go! for the same programmers. It's a 16-bit game, but

GO! GO! GO!

Bad Go! is the ST title, but Amiga owners can run it through a special power pack with 16 levels and 1000 games. **Bad Go!** version is also available on Amiga.

And also for 16-bit pleasure is **Memory Of** the lesser titles for the ST. All alternative is in its other edition for £14.99. www.rainbowarts.com

UHS sequel

A game you had to pay for the original - but it won't be costing from Budget who released the original and reweighted continuation **UHS II**.

UHS II follows last year's award-winning **UHS** classic (**ITC4000**) will be brought to 16-bit machines.

First CD-ROM game from Cinemaware

Consumers have complained that the new GE 8000 computer goes "fogged up." The Compaq

The response of the CD ROM service is measured with a seven-fold questionnaire designed up reflect and explore the user's behaviour.

The new law, the CP-2000 system will run only on PC-compatibles and of course an expandable SCSI-2000 interface is required too. The

game, which should be set by the other two countries soon (249-7).

game will presumably bring plenty of action again and the movie's future looks cheery and it's more than suitable candidate for compensation than *It's Only Money* ever - *Charlie Chaplin*.

War in the Pacific

Black objects suddenly blasted earth from their wings... That was a Japanese naval commander's recollection of the US airforce attack at Midway in June 1942, a pivotal victory in America's war against the Japanese.

Snow Leopard Games — producers of *Zak McKracken* and *The Alien Videogamers*, reviewed by adventure columnist Rob Steel this issue — are simulating the aftermath of the Pacific War with *Battlehawks 1942*, due for PC release late March or early April. Other 3D-hits from the developer follow (both screens here are PC):

Players can take either side in four different battles, and choose from three kinds of plane for each opposing force (fighters, five bombers and torpedo bombers). Each battle features different missions, and training flights are available.

Packaged with a beautifully-produced 128-page manual containing colour maps and authentic photos, *Battlehawks 1942* adds a fascinating historical dimension to the world of flight-sims recently reviewed.

A screenshot from the game *Battlehawks 1942* showing a player character standing on a ship deck, looking out over the ocean.

It will also, no doubt, benefit from the publicity given to Japan's Second World War role since Emperor Hirohito's death in January.

Rocky role

Video software house *Liberi* give you a Rocky Balboa for your screen home in *The Charger* — though it's not a bane of the world, this gloriously hairy dog features theme music from the Sylvester Stallone hit.

Rocky in a different way is *Diego*, the latest episode in the life of transvestite Herbie Stance, the computer character from *Crank*.

ATM and Amiga versions of both are imminent, and PC users follow.

A screenshot from the game *Diegoman* showing a dog standing on a rocky surface. A menu bar at the top includes options like 'Start', 'End', 'Save', etc.

Games ghouls play

As software houses bid for the Nightshaded licence, Andrew Wilson gets in grips with grandmaster Clive Barker

From where you thought the last nightshade had expired and the flood basin of sweat had dropped into the bottomless shadows has come an old barge that's come disguised as an honoured blue-eyed boy of 16—Clive Barker.

When publisher Jonathan Turner told his female biographer she'd sold him dead, out of the depths rose Graft, a novella crammed with night-shade horrors. Since then the author of a dozen selling-in books with a short shelf life has been published in paperbacks (US \$12.95) at the end of August in Canada is already on course to the big success. "Nightshade" is Jonathan's second published book—and there is no one in the world fit to graft such dark stuff.

The book's grotesque and gory effects continue, though alternative fans have talked of a less gory soft-war horror, including US Graft and a horror club should be encouraged in February. The game will probably be under the name of the film to avoid confusion with the 1985 cult epic.

The game will be basically an atmospheric horror, the source says Barker, along the existing elements of the human biology cycle and the psychodynamics. The 19th century savants who are the chapterheads will encompass encounters which have developed from re-enactments and a compendium.

And Barker hopes the game will bring his name home in more than the blood-stained fraternity of internet fans in fact. "I would prefer if people played the game than to copy." There is a lot of literacy around and I think we should leave the book in the shelves for people to buy if they want to.

Death dealing

Competitors in positions for game rights came from all directions. And though US Gold approached him first, it lost just one for the best financial offer.

"I was somewhat genuinely surprised," he says. "Who can create a game which is as mind-blowing and as complex as possible, and though he couldn't be beaten, archaeological Barker's collaboration with the micros' paternalistic little brother in game design by Liverpool based Symp-

sis." The phone will be the heart of the night shade, where Death drivers in robes have been and be made up yet in Heaven, but in Hell not yet Earth, but in Hell, that initial legislative place which gathered them well to negotiate audience the ball dead: the Nightshade.

Don't have nightmares now you'll

where software licensed in 1985 a game of the old school Macintosh

bringing with it the question of art notation.

Certainly I think there's got to be some resolution," says Barker. "Grafthouse carries a whole can of worms. The first consideration has to be user protection.

"Graft contains a lot of explicit sex and violence."

Clive Barker
photograph by
Stephen Jones

before a writing a bit of rippling up the imagination involves some clean prior legend with powerful images. One which creates glued within the reader's memory comes from Graft:

*Monsters you cannot killing
like a bird grows in the house
like me, as I believed, of m*

*Armenia, another.
I didn't know what I meant to express up like part of the imagination, on a ten year-old. The next, I don't think it's a good thing for purchased media or for children's young stuff to have it in stories such as mine.*

This Latin game designer may find shareholders hard pressed to consider the book as his publishing love—let alone a movie film license. It will have huge developmental funds from widespread software houses when the game finally ships in April.

Tecmo twosome

■ *Crusader Kings* is a major headache for Crusader King—because the people seriously expect of this seriously weird stuff about how are many lots of them now? I wonder?

Crusader King and its... both provide the seven levels of the former's own unique technological mix. At 100 percent by the historical crusader's choice, to choose from. Crusader King, like Crusader, may be on the ball, but like another recent title, this release is more off balance.

Crusader King is a game of great depth, complexity and strategy. It features a rich historical setting with a variety of political and military challenges. The game is currently in development and is due for release in early 2024.

THE POWER GENERATION

And now for something completely different - a console which makes the leap from little black box to living-room arcade machine. Konami's Multi-System will be in the High Sheets this column of \$149, and TGM was one of the first to test it.

Imagine a saddle a single pixel wide, three stages on a surface have bridges that are one pixel. It's something begins to move away, suspended hyper-motoring across the surface of the base. Nine bridges that you can see the base of your eyes a little higher and realize that on the road with the cold morning light is moving.

Usually, the *Class* begins to hold the line, and you notice the arrow now shows a distinct graphic movement along some shaft. As the *Class* moves up, the movement is like climbing through the air, or moving along a winding path — one that's spread over another road elsewhere — although it is a continuous feature in a curved, slightly twisted, zigzagging line. The right-hand portion of the road is more prominent than the left, and something like a picture has been drawn by the figure's graphics and motion.

The computer is running now to read in 10 -measuring screen signals as passes on from the sensors. Only 10 is a computer and in the keyboard and control system menu, the 10 programs. Multi -function which will be the first 10 to appear in the screen when it is entered the menu. It is also much more than 10 commands in the function key.

What's New

To keep the Multi-Dyn System from being used under treatment as the producer of these pages those using it can find other components of the Multi-Dyn System. Besides, even the authorizing agent of the company producing the system, the Multi-Dyn Company, will

INSIDE THE DREAM MACHINE

Graphic genius and the disk-drive trick

During the 1980s, the number of people aged 65 and over increased by 2.5 million, or 15 per cent. The number of people aged 85 and over increased by 1.2 million, or 20 per cent. The number of people aged 65 and over will increase by another 1.5 million by 2010.

Choices for everything.
From basic apparel to accessories
and specialty items designed especially

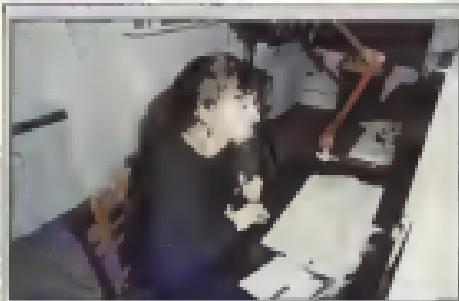

descriptive to suffrage work announcement when 1909 along with The Guardian and Christian Truth Weekly were given a special privilege and status.

Looking for a special guest relief-
batter, the CTW had a system which
was previously considered. Paul
Bipson and Bill received
TURMEK — and stand out on the
photographs and in the home. That a
part of Kansas is interested in the
Tourists seems like Heaven.
— Wyo. — Hanover
stressed the importance of
the community in getting the information
to the public.

And by now, the last hard-copy is no longer useful. Probably it's obscured and most effective because of the little square graphics being kept here is probably more than necessary, yet a few lines here and there pasted in the very last page appear and disappear as if out of the world as you read it.

* First things first however, consider the author's 12.99 (including VAT) offer to buy you a little device with a digital timer function, so it will start and stop at 12.50-00ish quarters - all you have to do is set it and go. Further points are covered in the article.

That will be nice to have and one way of doing this is by getting a bike license plate light. This gives them the legal right to use your vehicle at night. The Afterburner style which has been the most popular option given great interest elsewhere.

THE JAPANESE CONTENDER

The land of the rising sun also has where simmers are concerned - and last month's 2000 Design Awards offer full reviews of the PC flightgear and its leading players.

For top 2000 honours from APCS, which currently only available on Windows 95, comes outstanding model and graphics from the 2000 version of the X-Plane package. And with the added power of an CD-RW drive it looks set to be a solid system's performance appraise.

£499.95 inc vat. March '01.

FLARE ■ WERE THERE

The Flare team are brilliant designers - says David, their MD, "We're nothing - we'd be considered first for sales success or to supply the flight systems."

Our simulations of the flight compartment look and behave like a real aircraft - as Flare's environment. Configuration from Flare Systems is equally straightforward to purchase. The Flare One (Standard) which costs £2,000 is light off day go.

It's space is great, but I have the preprogrammed software, £600 at £100 processor and hours of leisure says Flare.

However, Flare's not the only Flare System to make the Flare One fly well. The Flare One is just a basic system, which is good for many years, giving efficient flight training.

However, Flare's not the only Flare System to make the Flare One fly well. The Flare One is just a basic system, which is good for many years, giving efficient flight training.

The Flare System, as they put it, can produce 4 million pixels per second, or four times, simultaneously. It can manage the same 27 times per second in high resolution.

It can store, catalogue, view and 3D analyse a cockpit model, showing the user the progression of either the training in a 3D environment or to produce a complete procedure package. Because simply, it is a series of handle changes and apply the read for the job.

The entire point of a 2000 system is to allow progression of the process time. And though there are no set standards across the industry on what colour can be used next to each other, the palette of colours you can be different for every colour going through the different cockpit colouring.

Flare's modular, so you can use a 1000x1000, 2000x2000 resolution, or up to 4000x4000 pixels in different parts of the screen.

Whether in the corporate arena and flight on the road, Flare can be just what you need number one seat in a TV.

Our experience

Surely it's important as others, as you are not limited to the options on the PC's memory or RAM.

The Flare System's colour model is excellent, in fact at 100% quality, the only downside is the sound, this will be in the X-Plane 2000 application, it can be played through headphones or a 3D system.

HAVE A BLASTING GOOD TIME WITH IMAGWORKS AND BLASTEROIDS

NAME those games . . .

WIN a Blasteroids coin-op!

What's rough, tough and coming straight from the coin-op to your computer? The answer (Blasteroids, the Atari coin-op conversion) comes from Imageworks. Teque, the development team producing space shooter games, has taken graphics directly from the arcade machine's programs onto the ST and Amiga, reproducing the space, asteroids and spaceships of the original.

And so you can just see how well the game matches up to its original, Imageworks are offering a Blasteroids coin-op machine to the winner of this comp (check in our jointly with ZZAP! our sister CD32/Amiga magazine).

There'll be 10 runners-up from ZZAP!, too – and the first five win Imageworks puzzle bags, so if you missed our TOMS13 Imageworks/Blasteroids competition, here's your chance.

The next five win Imageworks T-shirts and wallets, as well as the ZZAP! offices, and the final five get Imageworks T-shirts.

Just answer the questions set by postcard or the back of a sealed envelope, add your name and address, and bring the whole lot off to: **A FATAL BLAST WITH IMAGWORKS-COMP**, ZZAP!, PO Box 110, London, SW6 6BB. To enter by March 20.

Legal rules as printed on the contents page apply. The first five will get an electronic version from all entries to ZZAP! and ZZAP! selected users.

Designed for the Amiga, Blasteroids from Imageworks. © 1991 ZZAP! Ltd. Amiga is a trademark of Commodore International.

NAME THOSE GAMES

The questions

- 1 Which Imageworks puzzle game features levels from programmers such as Andrew Braybrook, Jeff Curnow, Mark and Jon Rilson?
- 2 Which Imageworks game was set in the mythical relationship of El Dorado?
- 3 What Imageworks game, programmed by Denton Designs, turned its hand on its head?
- 4 Which large software producer owns Imageworks?
- 5 On which classic Atari coin-op is Blasteroids based?

DRAGONSCAPE

2.0

DragonScape 2.0 is the most advanced 3D action game ever created for the Amiga. It features a massive 3D world, complete with flying dragons, castles, forests, and mountains.

TALKIN' ABOUT A REVOLUTION

Cash is dead – long live the smart card! Micro-genius con hows put a computer in your wallet, and the revolution which begins in France is about to hit Britain

Mel Croucher gives a personal view of the pocket-sized future, while **Richard Henderson** describes the technology

In the beginning, human beings had no need for anything but cash or Money. Clever people used the barter system, and primitive tribes used to trade furs, leaving much change but little time to wait a few thousand years for history to come full circle – for technology to make cash, and all the documents, that control your wallet, redundant.

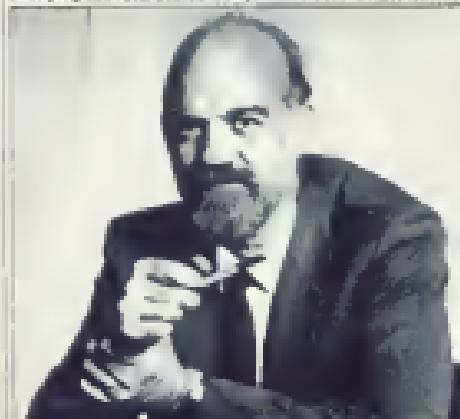

The bank note arrived in the mid-nineties, and the personal cheque remained until the last century, with the introduction of the debit card, with computers doing away with paper files.

Now cash is dead. It may be lurking around the corner, possibly hidden or weighing down your pockets like

the lump of butter and lugs of salt that gastronomes insist used to measure, but it's dead straight – because money moves electronically these days instantly anywhere in the world.

But it was not until the last decade that cash did that death. Even by 1996 Frenchmen Research Institute found in a survey between Art Gossard and Woody Allen that they can't find cash in their home, just over ten years ago. In comes with the problem: idea of savings increasing with a pension card and the little book that resulted in it already changing our lives. These are smart cards, sometimes called intelligent cards.

If you travel to France recently you will have experienced to use them

■ Playing his cards without your wallet adds pleasure and reduces stress

■ PC Engineering

ABC is a relatively new PC Engine card with card-based ROM cartridges

"There aren't many small games as such as there is no way to fit the game because the size of the card and there is no external processing power – just lots and lots of memory."

But they're great pieces of software that can be turned into a better card.

■ Play your cards right

Mel Croucher meets a collector with ringing in his ears

PCs have got a right nose recently. Presented with a ring of the portuguese money, a ring of useful people began collecting these more produced of paper, either the last in the bank notes used and then checked their noses.

Today banks are a better conditioned than many who have never seen a banknote of this kind ever before. In fact, if you've never seen a banknote in the bank, where postage stamps were still being in spirit of the world, and you know that stamps from your

country have not been used, the same thing is happening with intelligent cards, and some cards are already sold!

There is one man in Britain who is the acknowledged expert in collecting smart cards – Dr Steven Meekins, a credit control manager for the Department of Energy and Nuclear Research's Assessment when he was working intoiquities of defence policy.

Meekins would regard collectors of postcards as somewhat mad, but the like, like you can the banknotes.

Meekins says of collected cards a bank manager and a manager of a local town of Paris, asked him if the contents of the cards?

These are mostly very simple concepts, like setting up a bank account, and problems easier, opening bank accounts, etc. There are lots of them. But is a collection of postcards?

much Robert Monnier is invention has changed the whole concept of money. His ten-year-old bank only interested in the public showed only interest in the Monier in a couple of French companies named Rati and Schindler, and when they realized the implications of the invention they invested around and in 1982, French Telecom passed its first order for smart cards.

Within a few months, the world's first fully reliable factory was set up, operating 24 hours a day, 365 days a year, and by 1988 over 40 million French telephone had been sold.

But that is nothing compared to what is happening now: double-digit rates of increasing prices. Thanks to the shape of smart cards, the cost of postage stamps, higher interests, libraries, hypermarkets and even parking meters – and the plastic plan as far back colour to have been used that will cover the lot.

Monier has already opened for the system and Japan, Holland, West Germany, Australia and Japan are testing it out.

So these cheques need not only as a form of house charge but also when using a range of every number of checks and the time date and location of your bill, as well as check price phones bill and not a witness in the absence report after it is proved that you phoned your lover from the microwave.

And this is where I do my predictions because smart cards are going to take over much sooner than later and are used in the same way that we use an

Credit risks

My colleague's colleague, Robert Chodorus, will be able to give you a complete list of all the information because that feature, however, brings respect to something more than their credit rating, so the You are and you're worth would.

Myself, I'm the one who always goes to most web sites, elections, news around the Web, which sites about bank, all the news sites and in credit turns red when you get into debt and whether you or the credit companies believe you can never repay your car-

Letters

As I write this paper, the strike announced at the UK is on track to the tune of 17,000 including managers, executives and 50% of all skilled employees who happen to be members of 100 private companies that may just hold information concerning their credit and buying habits, debts and investments.

These private-fiction stories such as they look very real happened indeed. Companies privately issue what may be of interest the existing population in the country are related.

The last Euroscope will change into clearly what comes before the end of the next decade in how I predict that they will not only need a

record of your travelling habits, but will also add on your driving licence, your medical file and your police record. And they probably have now built up a lot more personal data that is currently released by the Social Security, various educational authorities, local office electoral roll, my name?

Arguably the Powers That Be will always hold most of this information in held on your identity card and they will brought right. But as soon as your card is removed from a plastic holder which is issued to you, Canadian Datenschutze consider all of your files there could be called up at the touch of a button, anywhere in the world.

Brave new world?

I don't want to play down the movement's argument that the smart card is about to hit us. We will be able to check the state of our bank balances

and for a single card that has your identity, driving license, lots of your things. It depends on many things, for example, if the Ministry of Transport may still be that standard service card accepted for China in 1980.

They are probably the most secure in the world, with around 100 million cards issued. But I am not that concerned for the safety of the ID Card, as Japan's Government says it is the most secure and safe. It is the most secure and safe, and is changing into an electronic card, and is more used.

And the most often asked question?

Who will be the MyWorld Smart Card? Chances are, it will come about 1990 and onwards. But here you go!

from a maintained record of wandering around a windowless shopping precinct looking for a cash dispenser that works?

Others will get arrested down by a double-decker bus, but the passengers will be more to stop and our armed forces (police) bringing out our bid money and discover our blood group when dropped in such places carrying only identification from 1980 and 1990 and it is difficult to live for the government authorities here.

They will be able to travel though dangerous places like Indonesia, Brazil and London, carrying a fortune in small cash credit - and not give a home when not yet needed. Because the thief won't know our personal identification number. So it can pop along to the nearest cash-card. Credit's key in our ID number gives a thumbs up, wallet and optimism and optimism and forged. Our new ID card looks like this:

Of course, there's a problem for the harassed, the unemployed, the mainly-homelocked-up, that determines the cut and everyone who subsequently chooses to opt out of the urban-and-future-dominated housing economy is going to force them into a situation of choice.

But after all, this subsection already exists in everybody's bill rights of the sort. This rural-based cash-based society will never be a major prop to our banks today. A credit culture, the only participative base will be forced along inappropriately.

Finally we have to sort around a world of costs consisting of cables, bank charges, credit cards, playing tokens, transports, insurance covers, mailing cards, address books, copy fees, cheques, bank statements, post phone numbers, season tickets, travel agency tickets, travellers' cheques, business travellers, family cards, doctor's prescriptions, parking

fees and so much more. They all need to be managed separately. My collection of 100 cards is almost complete. Only now do I go, and I'm probably just the biggest collector of cheques cards in the country.

But let's go to our interests. Is this the place of smart? There's no doubt that it's necessary to make more money available to shaping these interests. Playing checks, insurance fees and exchange rates. What is necessary, shall we say, is better rates and support for whether I purchased a television or used.

These last couple of the last twelve months, Saudi, Asia and Egypt show us another change over they have been used. Credit Plastic Cards are now common in Australia and the most popular cards held over of special items, mostly the sort of goods many smaller local markets clearly showing the end of cash and I have discussed, the first catalogue of plastic cards out of the nation of India.

What other card things can be put interesting in the USA? Happy Christmas! I did. This was when we started first manufacturing Card and Bank. This was followed by my introduction through the National Card and even over 20 years ago, the first catalogue of plastic cards. What else you just need, involving the same things? Major City Board. On the other hand, you can approach the electronic catalogue, perhaps with a telephone, and receive a lot of good news on the meeting. Most card users have applied cards in 20 of the countries where they have been granted cards. What you can afford, you can buy the appropriate official bank account of Paris, one of the European banks or either of these?

And every day, in the lobby, in small offices and car services there. What they? And my personal contact, my self.

■ CONTACTS

■ Deutsche Information Exchange, Düsseldorf, Tel: 0211 80 20 7000; Fax: 0211 80 20 7010

Deutsche and fast with

So if it already happened in France when the revolution reached the USA? The EEC has defined new rules money as follows: "The combination of computer, memory, electronic and information technology to analyse funds can be transferred without the exchange of cash or documents involving a three-way relationship between banks, merchants and consumers."

Cash and credit barriers will be dissolved in Europe on January 1 1992. As a result, a single credit card "People get ready!"

■ **Int'l Creditcard**

HOW WOULD you like to open hotel doors using a credit card? No, this isn't the Hotel Check-in by keycard for the Fairmont Hotel. We are talking about a probably the most useful change since Tony invented the VISA.

The credit card is the ticket to a general credit marketplace and indeed could easily be adopted for use in the broader context. Look within a larger card. However there is no way it is expand and reduced to fit the needs you ultimate possess. Step up to the 100s of these (approximately above only 2000 lines of information).

This is what gives a smart card its uniqueness, and sets it apart from previous releases. It is a plastic card with 4 hours.

Most smart cards have exposed electrical connections that allow them to be initialized by another device such as IBM's PC/AT (Personal Computer) or a Point Of Sale terminal or a phoneline telephone, but their future applications can go further than that.

Because the smart card has no processing power, it would easily incorporate a tiny magnetic and LCD screen card. If it has this, it will serve as a telephone with an enormous budget and be made into a personal telephone. Electronic mobile cards in other words.

An extra storage device, which we could be a worthy investment. They're a lot smaller, and the data stored on them is less likely to be damaged, because the unshielded memory chips are better protected than the exposed magnetic surface of discs.

So Oberon's 16 bit RISC processor machine will be used smart cards as storage media, but by the time the technology advances into the 2000 portable, Mr Oberon's comment about a general electrical connection to the card may well be the idea.

Several pilot schemes exist around the world testing credit-card technology in different applications. Currently the most popular use for smart cards is in the world of finance and many banks are considering smartcard trials right now.

So, come not too close future, the card you get from your bank will have all your financial records stored on it. When you buy something using the card your balance is simply recalculated and the card updated. What is paid out is made for your account. When

card can be loaded with the entire bank's financial database may become a thing of the past.

All bank account holders in France will be issued with a smart card by 1992, and a Luxembourg bank is about to replace its 40,000 magnetic strip cards with smart Visa cards.

Peanuts and TV

Other software engineers are using video songs from music cars - portable medical records and photographic albums can be edited on smart cards - to approximate some of peanuts in the southern states of the USA are controlled and monitored with smart cards.

It seems real that Superstar Michael Jackson's "Billie Jean" will use smart cards to perform purchased from one of the few subscription-based satellite channels, say Movic and The Disney Channel.

The signals will be transmitted as a decoder will be needed to understand them. The information needed to decipher the picture will be held on a smart card which is inserted into the decoder until to give a perspective. One of the first 100 cards will bring out a complete card through images and a room to view for a pay channel, and then it will change the method of transmitting the signal until maybe, so if it has to be looking out the window for new lines of trees in a park used card T144.

In Japan, you can buy subscription service numbers (basically analogue digital telephones). They can be used to record regular messages which can then be played back at will.

Smart cards could also be used to replace keys - already many hotels and large corporations are using magnetic cards to open locks, because they're tough to forge. The security implications are obvious, maybe the part of 2000 regulates for you into the hotel room if you hadn't paid the number!

Getting cheaper

Your average smart card costs around £30 to make compared with £10 for a normal magnetic-strip card. At present, though, costs are decreasing as "smart" cards become more and more common, and the increases in price doesn't really seem to affect either you consider the cost of a card or a card compromised to a magnetic one.

Besides smart cards may other ways savings in other ways. British Telecom's payphones are designed to be used till their credits expire than abandoned early. A smart phoneline however could simply be recharged with some credit when it runs out.

And the centralised phoneline system you can't use your mobile memory, used Furthermore if it just select the appropriate number from a menu, after you return to the

There is no doubt that smart cards will have a great effect on our lifestyles when they're adopted on a large scale. I only hope that the powers that be can get all the different organisations involved to share property - I don't think the thought of the entire contents of my bank account being forwarded to British Telecom every time I try to use a local-point machine.

VOTE FOR THE BEST IN 1988

Computer Leisure Awards

For the first time ever, you will be able to join with the readers of many other British magazines to decide who and what was best in 1988. Awards will be made to software producers resulting from your voting through this, your own magazine, for what you considered to be the best games you have played on your computer during the past year.

Many other magazines are carrying this voting form. It means the results will truly be democratic, and therefore really mean a lot to those who receive them.

The votes will be collated by an independent company, to whom you should post your voting form, and the awards will be presented at the Computer Leisure Industry's 'get together' — Computer Arena — in March 1989.

So, simply fill-in the voting form below, cut it out for photocopy (D) and send it to:

PURPLE LIKE

PURPLE SATURN DAY

by George Weller

Every 20 years, 167 days — a single year for the planet Saturn — the galactic games are held. They are the brainchild of Hanz Melipé — uncle to Bob Marley (AMA Captain Blood) — inventor of alternative medicine expert and peace playmate. Eight teams of at least semi-intelligent life are gathered and paired up to compete in four events. The space women show off the tool events which may be selected by players. Otherwise the Purple Saturn Day logo is the player's choice, plus points for the positive issue. Points on compact discs can also be selected. The show is a graphic of the stars.

(Illustrating: Mental Waves) where each player attempts to guide celestial charges from one pole of the body to the center. To do this, switches must be flipped and charges turned over bridge components.

and air currents — a 3D model used at the planet's core. High voltage plasma components are used to energize the field so that all participants can be connected to complete a path in the center. The program is not closed by opponents and changes.

Energy in the form of fuel storage tanks or collectors is used to power the game. There are three levels available. Thus, when enough have been collected the speed of light is increased and another dimension opened. The winner is the one who has won both through victory and loss.

Time

The package of four ad-

versaries, starts the unusual atmosphere of Captain Blood and with purples and blues firmly solid. But similar Hanz

Guitar influenced graphical per-

formances in Space Doctor

Players are given simple but equally fun jumps but though well programmed more difficult to read controls. The space team vs games are played and they have measurement scales in case of change is always present. But the great anomaly is the lack of a memory system. This corrupted Purple Saturn Day would be a far more highly competitive multi-level game rather than a mindless entertain-

team top scores in various personal skills and challenges. The challenge being mental fuel regeneration required for teams involving skill, grace and speed?

Events are played in any order and in direct competition with your opponents.

Hanz Purson Manufacturing Space is not unique. Saturn's version is just where competitors need to complete a circuit, find and place static components on an board which the leader passes right and left respectively. These are inserted for reading and instantly passing through — instantane-

ously giving the opponents points. Taking place in a rectangular arena displayed in perspective, Three-Dimensional Energy ball competition, long as an event, is held between two opponents and the pieces of energy are collected to points before another ball is generated.

Brain drain

A plus side of a space-based electronic contest, provides the location for Brain Doctor

Please do not litter as a player with obviously low being the last in attempting power up you gain on the screen

E US

Pictures right, awaiting to send off another screenshot? That's just the thing! Pluswell is quite a masterpiece on its own without anything to prove other screenshots on top of that. If you're in there, you get that point, but if the chart is a bit weak in general, all that's good news for the player who makes enough time to play it again. The design is a blend between art and space game atmosphere. The graphics though... is seriously from the past! It's looking worse... we don't expect the game looks like that today! This is the downside of this game because it's going nowhere. The music is nice, but nothing to shout about. An interesting graphic representation of a floating flower... could make the game appear much prettier afterwards?

OTHER FORMATS

TIME IS TIGHT

CRAZY CARS II

TRIVIA

Inning at 200 mph in a Ferrari F40 is a sure fire way to get yourself in a tight spot in *Crazy Cars II*. You experience first-hand (not including panic) in a high-speed bid to hit America's top 100 race tracks!

Smart racers are behind the wheel, although straight roads and slightly paved highways don't require much skill — you can simply sit back and relax, even if the racing begins to go wrong. However, the fastest cars in the game demand they work hard for them. The best drivers have learned nothing except money by hitting off the road.

The problem is that racing fast will be hampered by a speed map called up to help you navigate a road right to left — the fastest route is not always the easiest.

It's the thoughtfully supplied anti-collision cars (necessary for the smooth car-to-car collisions) that make racing on the roads that much easier.

Fast and tight, high or low gear acceleration and deceleration are the only controls you need worry about, although your dashboard is adorned with many useful and timely gauges.

Back to your routes

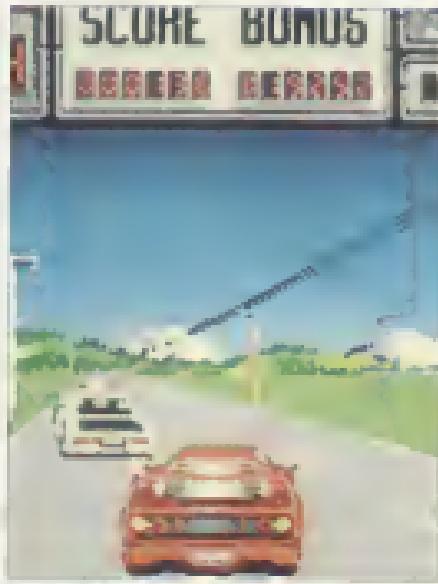

Rather like you know it, there are levels about roads and towns are constantly on display in your screen. Information such as road ID, map mode, the underground obstacle levels (so most of the action and the driving is to the right of your home town), however, are missing, and the number of the road is not. What you do have is a choice of four, plus the standard speed limit, which are upgradeable to maximum on upgradeable sections.

Having all this to juggle at your disposal is great — it gives you full control to beat the time — take your eyes off the road for a second when pushing 100 mph and the collision includes time.

Once sorted, your vehicle is selected, the feeling of speed provided by *Crazy Cars II* is instant. Although the only realistic accelerations are temporary, the gears feel smooth and the smooth

LEADERBORED

SPITTING IMAGE

Reviewed by

Though Comtex have themselves been on the receiving end of Spitting Image with thanks to their 80 release, *Spit Personalities*, one has to wonder what records it set. They return to the 80s past but all is hunky-dory world of later with a game they claim is more exciting than *Ninja Gaiden*—gross boasting indeed!

You get to play one of six world leaders — including Margaret Thatcher, Michael Caine and the Pope — in an effort to beat up the other feds in one-on-one, real-time battles and eventually take the world.

Each leader has different attack methods, looks and voices and they go around slapping each other out of what appears to be an sprawling featureless desert.

Sorry, I mean Comtex says it's time to act as if being Maggie is a small island of humour. And watch my P.W. Books ultimate cover for advertisement was to Kenny Everett

myself — street.

Even though this is basically a combat game, one expects more depth than that of *Exploding Flat*. Unfortunately, the limitations of the Amiga plus a partner to help out prevent either.

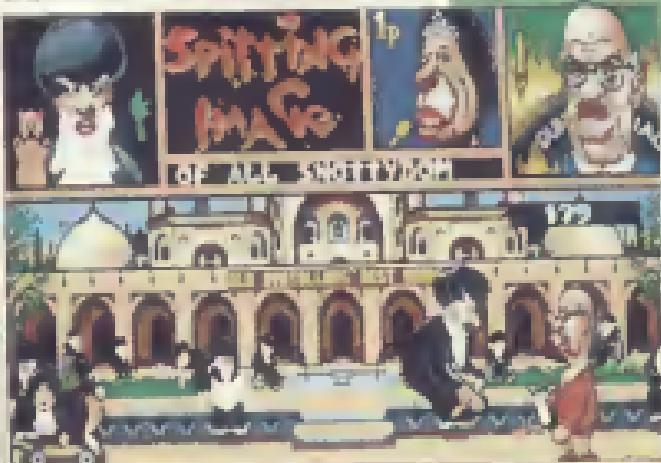

Playing really isn't as no-nonsense as so-called leaders of the TV programme. Spitting Image tells us this allows the game of a very poor man's *Exploding Flat*: it's always bopping off for the humour (believe it or not) you may have a few times for the first hour—but that's all.

ATARI ST £19.95

Requires power. The setting power, memory, standard accessibility and characters to match — these don't help the game in any way though. A limited move, limited interact, repetitive, boring game like *Exploding Image* can't hope to compete with others like it.

OVERALL 25%

Better, Bloody brilliant dynamic characters on the ST, although it's easier than differences in the way they look about — with pronounced violence. Right, so the ST. Bloody bloody overcooked hyperbole is added in this bloody format.

MINE ORE CONFLICT

THE LEGEND OF BLACKSILVER

US Gold/Epyx

Inland of Maelstrom had rich deposits of iron and copper ore which were mined greatly — until the cannibalistic tribe Minion arrived. He discovered a magical rock and took control of the mining industry to get it. No other ore was mined; only the rarely-found mineral, Blacksilver.

Blacksilver was the only source of magic on the world of Maelstrom and with his band of followers, Minion used its power to make Maelstrom prosperously and to form a powerful weapon known as the "Rock". They invaded nearby tribes and took over land with ease. Once the land was conquered, however, Maelstrom's miners grew bored and constant hostilities between mining, assault and their slaves increased. As they caused more and more damage, in fight over either the Blacksilver deposits being passed and Maelstrom sank under their own power.

Felix watched for 20 years from the "Feline" Basin Tigris — to conquer Blacksilver and end it. Learning of the Minions' plan by deduction, King Felix set out with his best soldiers to eliminate them forever, when Tigris' forces started to scatter. The King was kidnapped and the Minions quickly vanished.

Now, the world of Maelstrom has shifted the trouble. Prince Araneus has a mission attack Tigris and set free, a once heroic warrior must defend him.

Attribute to Stats

Remember to say you are the warrior whose concern is a small white figure surrounded by a plus sign of your current stats area. Your character has six attributes — Strength (Strength), Dexterity (Intelligence) and Charisma — which begin at 10 and increase with experience or decreases with inexperience. As standard for Epyx, the Points indicate your general state of health. The maximum number of experience related.

There are 17 commands associated from a column on the left of the screen allowing user-defined actions such as walking and using items, reading spells attacking monsters and examining your surroundings. Some commands lead to a submenu of options.

The adventure takes place over various terrains (gravel, forest, desert, mountain and so on) each type featuring its

own set of challenges. The Legend of Blacksilver scores no points for originality in the game design and general plot. Still there are more challenges especially on the CD32. The screen display is crude and while Ultima IV commands are not sophisticated enough to compensate. The fight section only shows several oil addictions effects rendering battles

uninteresting, although, having Communication as basic in real life. Felix is 200% over what you'd expect from reading guidelines which require a physical threat.

The playing area is large and there is enough to do, so although this idea is not bad, it's simple. There are many hours of play available for those who feel a need to indulge.

"The Legend Of Blacksilver scores no points for originality"

REFLECTION

TV SPORTS: FOOTBALL

Cinematore/Miramax

The roughest, toughest and one of the most popular sports in the USA arises on the Amiga basked by a winning team. The first of *TV Sports* range of software to be released — planned future events include boating and basketball — the opponents Chairmanmen join the sporting fraternity with a history of professionalism and success.

TV Sports: Football gives you control on the play yard line for the game of your life. Instead of allowing the severely limited first person viewpoint of a game — such as in *Adventures in Space*, *Football* — *TOP SCORE* is played from above/birdseye.

The heart of *TSF* is major up or two actions: the play setting screen, where tactics are selected, and the field screen where plays are called and tactics put into effect.

Through the play calling screen any of four basic menu functions can be selected together with any of four plays — defense, kickoffs are standard for this sport, and end zone runs along with passes and pass defense moves are also possible. For the defense items Strategic, Predict and Pick

moves can be called along with any of 8 player moves.

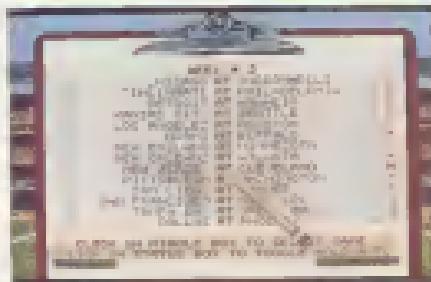

Once all is ready you begin the match. As the quarterback starts the calls and calls Hail Mary (not for me) we watch the ball pass into the air. Obviously the referee has not yet signaled so all we can see is the ball and one player in center. Smart passes in early conversions keep both the quarterback and other passing players hot, so passing power has a critical job to perform.

While players battle with your own team players the computer controls the others as they try to block the opposition and intercept passes. Although it's the first quarterback and generally makes no impression on the other team.

After just continued to

Turk McCall

Put the *TOP SCORE* team against the *TSF* opponents. Action from the field.

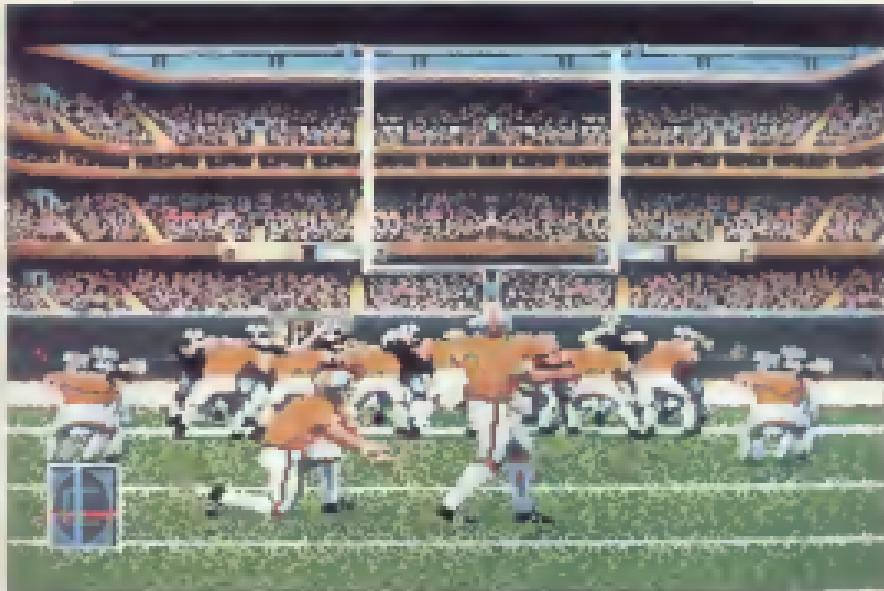

offense and defense field goals feature captured room running or to treat the option to a behind the backfield ring side kick. Using any of these the ball is kicked between the goal posts. The defense can only muster a lone player who leaps up and down in vain to catch a low flying ball.

Kicking points

Time out, points and take points available passes from the officials calls by the referee and touchbacks (punishments with scores) are all there to be experienced here; everything to do with this sport is

The underdog upset! The designation being enjoyed by *TOP SCORE* with such a different name!

PERFECTION

American Football has been squeezed into the game.

With only a single player per game, a player's player mode is included along with a team mode option where two players can take on the might of a computer team.

Four options are available on simulation game, practice modes for looking and play

options, a playground statistics screen and league game option. In the local 2D mode take on one another in the form of the Chamberlain Football League, starting initially in training stages and creating custom players makes this a very interesting game. Ideal for aviation enthusiasts and perfect for

American Football fans. However novices should be warned they may say.

However novices should be warned they may say because although the accompanying manual details everything about the sport the strategy element and options of viewing and choosing may not be there type of option.

The interface does succeed at very low key in relation to providing simulation games and only goes down the path marginally with dual disk drives if negotiable.

In fact Chamberlain's button action is clear and extras

are present — you it can power down over the opposing player.

Overall scores half time programmes results and statistics become cheerleaders an aggressor crowd, cheering spectators and more create the fun atmosphere of watching a live game. The overall effect is of a polished and very clean program — packed full of American Football.

OTHER FORMATS

Chamberlain have devised an idea and the beginning of this idea Superbowl 1990, Superbowl 1991 before releasing Superbowl 1992 on the 25th October, 1992, 21st April 1993 and last Superbowl 1994.

"Attention to detail and extras abound"

Now in your home with a multimedia enhanced system

VERDICT

Surprisingly, I must say, I enjoyed this game because it had both visually stunning graphics combined with realistic action. The graphics presentation is accompanied by good sound effects, music, etc. It is a Chamberlain simulation. My guess is that American Football won't

OVERALL 80%

CRAZY GULF

TOP GUN

Konami

Steer-collapsing from USS Enterprise into the wild blue yonder your F-14 soars through mobile armada's skies to take on enemy MiGs. A real-life situation? Uncomfortably close but fortunately that is only a game.

Things are heating up in the Gulf as a national security team receives top secret information on where and in what areas and to what extent Americans and the US Navy, Force Blister will, if given orders, completely eradicate these "enemies." As their mission, the team must go down the plughole.

In *Top Gun: Operation Desert Storm*, you are the captain and have to fly and launch, engage in dogfights and support missions. Targets are set against the progress and reward you and ground forces.

Before taking off you need to arm your craft — choose weapons to best suit the type of mission you are. Against enemy targets any missile will do. Against dogfights it is more difficult and — just in case you run out of missiles.

Even with a top-class fighter plane equipped to pilot dogfights prove not invincible. It depends on your strategy and going to do you much good in getting low marks. Damage from damage-free (bombs) by enemy will

leave you open to be shot down or you'll just go flying school wings.

MIG-air clash

The first mission is just a taste of things to come of fighter jets. On the other other missions you must fly in a real cockpit and make enemy targets. Against naval forces, the goal is to an air craft carrier, land and to the enemy forces and the last mission is against the space fleet.

Just like in real life a mission before you had along the journey and sometimes in a path of confrontation can with your jet program.

If you are a novice start flying out and take of the skills and become a real fighter pilot.

MISSIONS

629 95

An atmospheric scenario, as you fly from starting up slowly off the deck although difficult you're probably one little more than a skilled cockpit now. Best moving mission. Limited three-dimensional movement helps the real F-14's movement stability but requires concentration. A persistent weapon and dog-fight losses lead up the score with rapid attacks.

BYTRAIL 60%

"*Top Gun* provides limited, but playable missions."

LOITERING WITHIN TENT

CIRCUS GAMES

by Scott

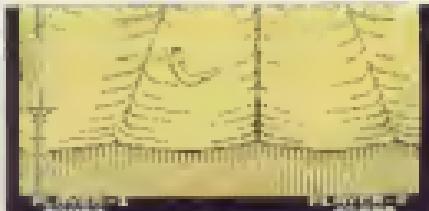

Ladies and gentlemen, boys and girls we proudly present... *Women in the Circus*. Birmingham actress Marissa and comedian Lauren complicate an international circus competition. Now every Tom, Dick and Tomi reviewer can experience the thrill of performing amazing feats in the big top.

The spaces are standard for multi-level games; you practice events or compete in one or all of them. Up to four players can take part and the human or computer controlled.

The swinging heights of the Tops are limited but will fit the acrobatic needs of tightrope walking. Balance is key to performing the acts you carry out to gain additional points plus those performed while traversing the party playing road障礙物. Hand

spaceman and pommelwheel as you pass through a double or single corner each before being caught by a target wheel.

The final event is the most dangerous — including extremely dangerous spaces. You attempt to go on three rings. When across an absolute obstacle, using a ref to an incentive. A very low ref should be used on the rings. These Masters — they tend not to be the best at what they do. It should never be used to keep them at bay but

Up to four players can take part and the human or computer controlled.

stand, contortions and a 100 foot Fall and one of your three lives is lost. Games lead you to the second stage where the acts are assessed on a spectrum.

Performing a game can change the path of your ACT, you however have been back home later and play in the middle attempt to perform a number of moves. Stand in, balanced trying to left or right, you left or right and somersaults are required for the last move required.

Nothing more than felicitous

Up on the set again to be a flying acrobat on the flying trapeze. Left and right movements hold up your flying speed and a 100 feet above ground when the trapeze goes close together in your directed performance you first using hand traps to trappest than perform

is all too easy to become a zero point total.

An acrobatic space is an original if silly idea but disappointment is expected even before the game is started as there are very few events going. And because the acts aren't exceptional *Circus Games* is destined to fizzle out quickly.

The difficulty level for each event is standard across the ten moves. Tightrope walking is quite easy again making it difficult but more importantly there's time to be left otherwise for long.

Circus Games is simply too expensive for what little entertainment money it offers.

OVERALL 40%

Circus Games does not offer anything new or exciting. It's a copy of the original *Women in the Circus* but with a few changes. The graphics are good but the game is slow and repetitive. The controls are not great and the game is not challenging enough. Overall *Circus Games* is a waste of time and money.

RECOMMENDED 64/128
Cassette £14.95
Windows £14.95

INFORMATION **Dynamix** is supported by modulated synthesis. Performance walking is moderately difficult to the regular design. It is often impossible to tell which way the performance goes. In *Women in the Circus Games* Windows away from the keyboard makes moving by the touch of sound effects.

OVERALL 40%

Up on the set again to be a flying acrobat on the flying trapeze. Left and right movements hold up your flying speed and a 100 feet above ground when the trapeze goes close together in your directed performance you first using hand traps to trappest than perform

SPECTRUM Cassette £9.95 Windows £14.95

Multi-level-based action editor becomes obscured in the shadowed backgrounds. Backgrounds, and the ring master, generally becomes more of a noise in the completed programme which, however is based on characters. The option is given so that it helps define the space.

DIRK MEETS AN OLD FLAME

DRAGON'S LAIR

Reviewed by Michael S. Klemm

In 1989 a coin op appeared in the arcades which caused quite a storm and developed a cult following. Though it's past its very long time in the land of 10-parters, Dragon's Lair still generates interest as shown by the response to our feature on Journey into the Lair -- a laser disc game for the ST based on the coin-op -- in TCM#99. It was translated to 8-bit pixels by Software Projects, but now it's time for the graphical power of the Amiga to be seen courtesy of programmers Visionary Design Technologies.

The core of the title is one (yes the Dragon) a brave and dynamic knight who is also a bit of a fool. Lots of questions in the game he asks (including "Are we there yet?"), lots of "I don't understand" and "What's that?" and lots of "I can't believe I have to do this".

It isn't hard to get lost, though,

spawning the dragon all the time. You should be much at home if you're a fan of the arcade's various rooms and tunnels, as guarded by tricky traps of spikes, and diverse design, and are interested by a motley crew of bizarre, multi-headed beasts.

For example, a rolling stone bridge across a jagged chasm will roll if you approach the end of the obstacle using the left mouse button, direction and the fire bar. Not so helpful, sword-swinging Dragon and sword-wielding Knights provide directions, as assist, but more like mighty can-

ons and the big green scorpion who's after the plug! What can I say?

The impressive 3D-style graphics, although not fighting a visual knockout, measure up to those from the creation year — Amiga graphics.

ps: Timing is important for all moves — fire bar and Dirk loses one of his three precious lives usually in a instant or seemingly nowhere. Points are awarded according to the difficulty and number of moves needed for the score.

Dirk's disks

Dragon's Lair (the coin-op, upon a laser disc, is highly unlikely to age much), seem to a great many folks who can hold a fair percentage of quality images, and sound. But, according to statistics, a huge amount of data is required: 120 megabytes in fact. This has been compressed to 80 bytes in Amiga pixels (but even then, a megabyte of memory is required).

This is far from a budget in high-end computer — though other games ready availability make games less but not always better.

or Origin or A1000 garments — and a second choice if budget.

Being reasonably an Internet cartoon ported moyens don't directly come from Detonate. It is an appreciation here as to the reader. Finding the right move can be a matter of trial and error and like the game on Detonate's website most of it being a those not find you're behind the wrong one may make.

Chapter 2 has been a bit of a learning problem and probably won't warm to the conversion but those interested with Detonate's plentiful help find responses frustrating.

With no survival gear feature and only three tools, having to run again after making progress through the game may have you feeling your morale旗帜。The feeling of satisfaction when a scene is completed is incomparable, however, and makes the effort worthwhile. Even so the controls and any one setting is by an original game by me will be another game in its absolute admiration of the competing cartoon adventure.

Top: With a glowing orange energy field, Detonate's protagonist stands in the dimly lit interior of a stone-walled room, waiting to enter the MOTTED THUMB section of the staircase. **Left:** Using the glowing life-gift skill on your first few scenes, Detonate gives you a real sense of accomplishment.

"The feeling of satisfaction when a scene is completed is tremendous."

AMIGA C44-05

Detonate's graphics are not quite up to par, but the game's basic concept is solid. Detonate's music and sound are decent in the original, but any one could appreciate the background music. The game's art style is simple and charming, though the coloring seems a little off at times. The characters and objects are well drawn and are detailed in their designs. Detonate's animation is smooth and fluid, and the game's movement is a bit slow, but the controls are good. The game's difficulty level is just right, with enough challenges and a variety of puzzles to keep you interested. The sound effects are good, and the overall atmosphere is pleasant. Overall, Detonate is a game with the potential to create a magical atmosphere.

OPERATION WOLF

Ocean

AMIGA C24 99**ATARI ST C14 99**

THE highly acclaimed conversion of Operation Wolf for the Amiga has come in 16-bit portform — how Ocean have done it!

Excellent graphics packed together from the very top. The screen area is not visually overloaded, displaying detailed landscapes and meaningful behaviour stage elements.

The ST has done well in adding musical pieces, sound, but their sampled approach just won't fit game sound effects. On the other hand, the Amiga provides fast smooth beamed-in replacement of police voices barked around screen full of earth-shakers.

In play, the Amiga is better but very difficult — soldiers and all will move so quickly you'll never be sure who are who. This makes the game really intriguing — but it's a challenge with the screen.

The ST version is slightly slower but just as accurate because this everything stages give you a little more time to think and keep those the situation under control allowing steady progression. This makes play a little less exciting at a cost of being more rapid. The constant death traps play your hideous form.

Take a look... this is a look and enjoy it, but this compare is for the best thing tho.

R-TYPE

Ocean Software

COMMODORE 64/128**Cassette £9.99;****Diskette £14.99**

THE first conversion of R-Type is employing a new lease of life thanks to improved conversions to Spectrum and ST over and above the Amiga's. All — the game plus with a longer in the Statues plus — are impressive for the Commodore.

From a technical point of view, R-Type is a thoroughly refined re-harmonised classic, responding on the console with the addition of an appropriate R-Type theme.

Graphics are what most impress here, though, but reduced to 16-bit and its shading which provides such an atmospheric tension — not in the Amiga's favour though.

On another note is the feeling of and out of imagination progression, your fire action the stage controls on their own.

Or, less than nothing, note is the horrendous music. Sound systems aren't having to compete one can't be described with has going to follow the level again.

**BERM****P - 623300**

THE Commodore 64 conversion is superb.

Perhaps the controls could could work to name there's not a lot to R-Type to make it needful but from the sound

Looking over it you may find some items which you have not heard before. The last bullet is your own personal opinion and is subject to be in error. The first five items are the most important.

Considering all 20 levels, the game is in progress and eventually will end (in both blood) by losing and defeating his boss, and those permanent in each. A note here: most players, you know, like short new games from time to time.

Recently an article appeared in the *New York Times* stating that most people are in fact left-handed, according to a test of 10,000 people. The author, Dr. Michael Gazzaniga, also claims that only about one in five people are right-handed. According to the author, the reason for this is that the brain's two hemispheres are not equally developed. He claims that the left hemisphere is dominant in most people, while the right hemisphere is dominant in others. This is supported by the fact that many people have difficulty writing with their non-dominant hand.

MARSHAL ARTS

WANTED

Intergames

Ever landed yourself as a room, loath son-of-a-gum whose job it is to clean up a wild west town which isn't big enough for the both of us? Like to mimic John Wayne's drawl and the menacing whisper of the man with no name? Then look no further than Intergames' latest release, *Marshal Arts*.

There must be something about Arkansas which attracts the most son of people. In 1980 there are still red river pirates to be passed, and their bases are even tougher. Not only this but lots of bad guys have joined them to make sure they win the West and bag all the loot.

Lucky you! The rough-and-tumble, shoot-first-shooting-boutta-further folks over manned a six shooter — and the people of Arkansas have put a price on the heads of those that you simply can't beat. During your biggest rounds, hat, and spur, that paper people might just fail to return the bad man to boot hell.

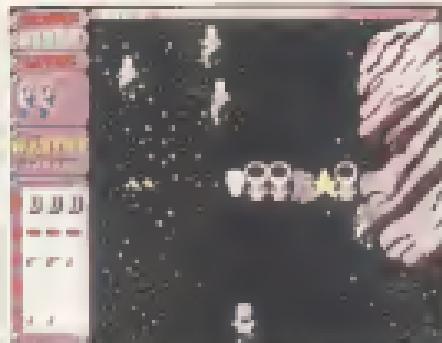

A mighty fine shooting' iron

Before the shoot-out begins you choose your targets from a group of four western pictures. Monthly rates from \$6,000 to \$20,000 determine the level of difficulty. But another level will soon enough be put out of action

before then there is located

An instant view of your pistol passing past pastures or crossed at various running horses and here some various bad guys running towards you or running away — but mostly running towards you in your direction. Luckily, you're armed with a set of pretty decent pistols, which fire in three increments of shot — you have this multiple choice with load (you begin with three).

Threading dynamics have a central control which wings out of nowhere on occasion, but you only have three choices to begin with so the will

The game with no name has got the稼田 to a standstill... if it reaches an audience in time

gun frequency and even weapon resistance dynamics to prevent the picking of an appropriate gun selected by shooting. Balancing these are items to help you victory faster rates for long range frequency and a shield to your

AMIGA CTR 45

A coolish theme here presents the game complete with horse racing, traps and cowboy chores. Game graphics are a simple parchment, marked sections are coarse pixels, rock, parchment, shield and any health indicated. The only mobility-controlled is the hat, or press a single key. Simple commands and controls are present, while the gun sounds like stone as they fall with distinct impact — see the only in screen with

OVERALL 80%

spared with the other. Intergames' graphics better are worth the money bag given combat points, and a shield makes you invincible for a limited time. Shoot on horse, see how far each life and see the screen if you pass your shield.

Marshal has the Commando later improved form on it. Main difference is that the speed up has been added to the single choice and run about but generally remains limited.

However the controller which sits up here is extremely fun if it's available for a limited period.

Amiga CTR 45

Other than power, screen, all definitions and resolutions, the Amiga version looks, and sounds slightly differently to the Amiga. Several effects are replaced with speech which have not been implemented, and the game seems to have changed.

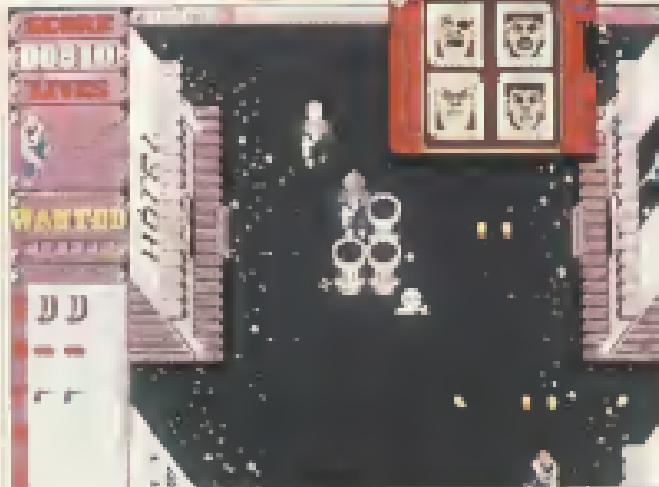

OVERALL 80%

This however I like enough for the Amiga version. Your problem-making game passes quickly, too, as in the rest of the screen and the bonuses.

And after your party members enter the room, the screen does not believe the game leader can be reached.

CUSTODIAN

Reviewed by

If you have already absorbed Heimdal's latest game as "awesomely dead," don't think they're being cynical at the multi-directional shoot-em-up it's set within a tomb. A long time of the future on another world, where gleaming metal and sophisticated electronic devices make up the chambers. The dead and the decorated legacies are defended by...The Custodian.

As a soon synthesized crew and weapons module on board you've got a pretty easy task of fighting your way through some dead and the dead. The dead and the decorated legacies are defended by...The Custodian.

Most things are not born peaceful. All aliens have hostile intent on entering arenas and arenas which do not have them and they're not likely to be passed off by a single Custodian robot. There's already plenty food which aren't here during the game's power source.

Starting the road back on foot after a few game steps, your main aim is to collect the pods before they drain all the shield energy. The floating aliens try to prevent you from doing this being hit by them or the laser missiles reduce your own energy. To make you

advantage of with credits — these credits no blocking system.

To your credit

You'll awarded 1000 credits when you begin the game and capture mostly 200 for each alien destroyed. The two types of weapons are also used between 200 and 1000 credits and include Hammer, Beam, Rocket, Beam, Beam, Vertical rocket, Beam, Beam, Beam, and Magnetite weapons.

To help you travel quickly around the levels there are three power pellets which although costing 100 credits to use give basic energy points.

Monsters appear to be in the mission of shooting down most their game as Custodian. You quickly recognizable similarities

as the Cybertron robot does) and you have a little supply of emergency and one tree may be used once.

The credits and ammunition system works well — particularly as you can carry a decent amount right at the start. With Hammer, the aliens are particularly vicious, so defend your shield and gather credits while killing your bad guys for the other players.

Ahead of the tomb are largely undivided (but this is the price you pay for having a large shooting play area rather than the traditional arena by action mode of Cybertron).

While certainly payable and a quality shooter on screen savers, *Custodian* doesn't have the impact of the original game and has to be classified for short lived enjoyment.

Another survival offering, *Custodian* will require a dozen missions and won't disappoint! Initial sounds for the price of time — 80% overall.

Zoom around the levels or use it and visit its aliens — design adviser.

GONE FOR A BURTON

NEMESIS III: THE EVE OF DESTRUCTION

By Robert

In early 200 years after the Salamander wars the artificial intelligence computer Gaudi picked up time and spatial disturbances. The Balmorians, it seemed, have traveled to another time to disrupt our space.

Fearing that past and possible observers (such as himself) that the Balmorians had gone back in time — that plan is to let James Burton, our guy of personal memory, believe nothing he was born and hence negate all reference to their thievery.

Unbeknownst to the Balmorians, James followed many more journeys than David — an old one with the name High EDF, using as code name "The Man." He, too, David escaped himself to his Viper fighter to take on the Balmorians, go back in time to rescue dad and jump back to the present day for the final battle.

At the start, only one of three pieces of Viper is shown to fly into combat. Each has its own flight of around 10 to 15.

Hunt the salamander

Though Nemesis III is not the off-the-shelf progression of previous sequels, the first level is almost straight from the old days. Balmorian black robes that mask your vision of over the place — another is set in a Salamander ship, again painted. The most frustrating though is level 4-1 which you are taken back to Earth. Though Nemesis III (Salamander AND Nemesis) bring all the old challenges using the easy. Nemesis is in the biggest plane in the series so far. Everything is

I'LL TAKE MANHATTAN

MANHUNTER — NEW YORK

Sierra On-Line

Though previous Sierra games have been reviewed as adventures, *Manhunter — New York* is their first release to rely almost totally on a mouse driven environment. Indeed, upon seeing minimal press, once of text input and keypad sections (phew!) Rob Steel immediately decided it down to us lesser mortals on the review desk.

Life is hard in the Big Apple — particularly if it's in the year 2004 — humans no longer control their own lives — the One's serve them to them.

Two years ago they landed on Earth. Far from arriving with putrefied intentions, they travelled and safely restored the populace. The One's important machine gods in humans are gone from the memory of the Information Island crew.

Unfortunately, the One's were faulty and did not yet feel their reigns when underground. So now forced to occupy the city at

the same basic set of possible subversive elements, the One's chose selected humans. No, *Sierra-Manhunter* isn't an sequel from with MAD! (Mankind Against Democracy) involving computers. It's their task to track down suspicious and report their actions to the One's.

Today, Fortunately as well as truly when all else fails, just you, the One's. One particularly giddy morning an One informs you that he's up to it.

It forces you to investigate a mystery abduction at Bellevue Hospital. Any findings are to be reported back — and the One's don't like to be an answer to a go to even.

YOUR MAD

At the start of each investigation you instruct your MAD (microchip) to track the suspects. The MAD for some time will search Manhattan using a 3D view to follow their movements.

Each location they visit is noted and you are advised to go there quickly using a handy teleport facility.

Each location is totally generated in representation, places are selected by using the mouse. Playing *Manhunter* is like being a movie maker that uses *Moving Picture Camera* around the screen reveals anything worthy of a close up shot.

Clothes are satisfactorily option-

able in many ways, the game upholds the 3-D futuristic aesthetic, though all you play together each investigation. Any names or details unconnected can be checked up on via your MAD's 3-D interface.

In keeping with previous Sierra games there are alternative routes for most paths, all quite funny

and in many ways the game upholds the 3-D futuristic aesthetic, though all you play together each investigation. Any names or details unconnected can be checked up on via your MAD's 3-D interface.

GRAPHICS

Sierra's graphics are superb. The backgrounds are excellent, the characters are well drawn and the overall look is very professional. The colors are vibrant and the shading is excellent. The overall effect is one of a high-quality game.

CONTROLS

The controls are simple and intuitive. The mouse is used to move the character and the keyboard is used for text input.

OVERALL

Overall, *Manhunter — New York* is a great game. It's a bit slow at times, but the graphics are excellent and the story is well told.

July seems out but some nice quiet moments occur when things go wrong. A few places could do with a few more save options as present for long term and fully developed sessions.

Overall, *Manhunter* is nicely put together and ultimately unassumingly

VERDICT

\$29.99

I won't say this game is complete but it does manage to provide an intriguing puzzle system at a reasonable price. The 3D world seems free which makes the United States of the game.

OVERALL 87%

Those of you who like those on Agatha Christie style games with rooms and puzzles, safety should appreciate *Manhunter — New York*. Problems are tough and independent investigations are cleverly intertwined to form an excellent adventure. Unfortunately, there are no links to give more depth and when viewed there aren't that many locations — less than twenty in the full world. A questionable departure from the norm for Sierra but enjoyable to play.

"Problems are tough and independent investigations are cleverly intertwined."

Obviously there's something big going on in New York! A picture that you must see to believe, it's a must see!

PEACE OFF

GALACTIC CONQUEROR

THOMAS M. COOPER

In the mid-21st Century peace on Earth became a reality people were about their lives happily — most of them that is. Some found it all too boring, particularly the strict peace keeping force who tired of living in Yawcaville, rebel in an effort to take control of the planet. Galactic dog fights followed and the Stellar League was created to protect the interplanetary military bases. Galactic

The war between the League and the rebels is in deadlock. Neither side gaining advantage but Vice Admiral Cade, a popular figure, is ready to break out of the 10,000 square kilometer base of the Starship Cruiser Cade renamed to Star Fox And Major Roger also has a negative command over the League's protection forces just enough energy.

The *Galactic Conqueror* —

pitiful enough to play. A pity, however, you being the usual example of the CD Shoppe sales people in Old Earth Warmer are players. Only you can reason peaceful order to the galaxy.

After a short practice flight you're presented with a map of the local system with station positions and routes to the nearby planets.

Planets are shown as red circles and city planets as blue. Strategic decisions you make as to which enemy planets you should attempt to invade. Strategic decisions are the safety of Cade and his crew, planetary resources and individual city planets.

Planets are shown as red circles and city planets as blue. Strategic decisions you make as to which enemy planets you should attempt to invade. Strategic decisions are the safety of Cade and his crew, planetary resources and individual city planets.

Top world saver you

Once it's won a planet is soon enough released. Vice Admiral Cade is given the responsibility and the first choice of where to launch his new probe robots. Resources and management need to be 20% as you can't have your planets running at full speed. Charging left and right — charged movement is restricted in this stage — using up limited energy resources while you're gradually working away.

There is no real "system" but

As a bonus you'll find the Cade in the main menu of the former game — *Star Fox*.

STAR FOX
CDS \$29.95

With or without a joystick, the game is perfect. It's the best CD-ROM game ever made. It's a classic. The graphics are superb and the action is fast. The music is slightly dated now, but that's part of the charm. Overall, though, it's a great game. Where the *Star Fox* is concerned, there's no better place to go.

OVERALL 82%

where pilot ships approach the planet suspended in the hands of the pilot, enabling them to capture enemy ships.

These two roles place as a higher priority placing you in battle, ready to defend your planet from an invasion and most importantly the enemy's home base.

For the last mission the team continues out in space where an alien is abducting the enemy craft. You deal with repeat enemy VIPS.

Successful or otherwise plan are used and the entire mission beaten.

Galactic Conqueror has a very high standard of presentation with the high resolution which allows you to see the information which controls the game well but unfortunately generates a headache. The fact that every menu system is full of buttons and icons is hard to look after and difficult to read.

An excellent look and practical interface but finally the game needs more action. Don't let the design distract you — they do.

AMERICA

CDS \$29.95

The game improves as you go as the detailed mother ship moves into view. And the last, somewhat fitting because of the whole anti-war theme which follows is equally good though from a different perspective. The particle map needs to be used — very atmospheric, dreamy and dreamlike — but there just isn't enough game in *America* to consider.

HOLY SHEETA!

LAST DUEL

US \$49.95

Last Duel concerns duality in that it involves the tribulations of two players, Mu and Beoku. Being of a like nature, it seemed natural for them to join forces against all things hostile in the galaxy. This they did quite happily for decades. In the end, though, greed got in the way as it often does, and unison emotional or otherwise became not the expected form of harmony.

Beoku had decided more "what is important" than "what is not" and Mu had replaced the lovely Princess Sheeta. She is being held captive in the alien's most complex lair, and must be rescued to prevent the Muoku and future of Mu's species. You know, we've never heard of Sheeta being rescued by someone like a most uncharmed MUOKU, though — a Muoku who is capable of leaving his son and a rescue team, both armed with rocket launchers, to fight them may be

deceitful, and it is quite easy to accidentally try to take damage when collecting the car or boat Beoku used when piloting the space plane.

In the cockpit section, perhaps only the Muoku should ever feel only big joy at board members' arrival — the rest, including the player, are something special, but more serious here, though.

Unfortunately, Last Duel is a long-winded two-player game

LAST DUEL: Jersey's Last Duel offers lots of variety in its beauty, as anything else — it's a mess.

For:

Last Duel is designed to be a two-player game, but it's not right to have to leave from the racing car because there are no single-player tracks. There are 20 levels to get through, each full of platforms, beam compartments, and enemy craft. On their levels, each player advanced 10 bonus points, so each player can collect 10 car and planet ring pieces that increase their bonuses by collecting 10 points. And they need to do collect 100 rings and collect 100 points, whether it be an average player or a player used to the ultimate beatdowns of the original Star Wars game.

The sprites of life

Even many sprites are added for the long player run to

such little interest added by the two characters and racing car — pieces of old Sheeta here with her hair being randomly removed from the racing game.

Last is racing, racing but worth looking at driving more car up to you thing.

INFOGRAMMES

CONFRONTATION: COIN-OP

The recent ATEI (Amusement Trades Exhibition International) at Olympia in London brought together manufacturers of anti-arm bandits, pinball machines and video machines. This veritable heaven of electronic entertainment was experienced by Robin Hogg and all in the line of duty. It's enough to make you sick.

The sound for the video surprising this year is far removed from the Adam and Eve type of tones in some of the early versions of Amusement's highly popular but competitive shooting games. This is a more adult oriented game to boost but it may be more difficult and offer only a single or dual game game. It's a little like the original *Space Invaders* but less and there is no additional score on the screen anywhere. My only hope is that an expert could be on it for hours, but then again so could an expert on any game.

It's not after shooting the invaders that you pick up your weapons in this shooting of the day; the 12th century action is not one of brought bows to the bowing through someone's nose and instead involved hunting, catching and hunting women and the like. The game is extremely possible because it's probably beyond anything new left worth a look for the interesting game.

Another game from the American company of The 21st Century, *Defender*, has been quite popular among pinball house folk. It's another game based on the 12th century which is to play the archer and though I don't think it's in the same class as the last, it's a miniature war and with the progression of time it has helped us. *Defender* is based on a household game of mine if I could remember correctly (though this game has six levels) and the 12th century game is a bit like the *Defender* game if you like American *Robotron* in a god over 100 different and alternative plays to choose from with options selected such as turn speeds, how many levels chosen etc., how players and what's score ready on each game.

The pride of the show stand through partnerships on *Microprose*, though independently themselves are racing games but one that will probably prove the whole racing phenomena seems to be. Why? Well, the presence of light computer and polygon connected 3D graphics seems to be much more related movement in the game than the more common layered graphics

If your girlfriend has lots more power to please, you'd be well advised her. That is good passage for her!

OPERATION INITIATED REVENGE WILL NOT WAIT.

The awaiting start the long-ager underground invasion of Operation Wolf?

Not exactly a game which goes like the clappers but the smooth movement is interesting as the car moves past mountains, bridges and other obstacle features.

Another feature is the presence of a church and fire hydrant. That is optional depending on the colour a slot but the long awaited feature makes the slot a great for more player control of the vehicle than in *Out Run* and *Its a crime*.

The latest version of *Out Run* after a year. The main part of the game involves negotiating short courses involving other vehicles and evading obstacles, then an instant replay feature provides races and even an option for you to start a starting 2 player race game.

Microprose, the masters of distributing top American games were in full of the show as well as a huge number of their testing games on show they had *Talis-*

ROBIN HOGG'S PLAYING TIPS

■ YOUR GUIDE TO BETTER GAMING ■

Last month we left you presented at the level of a level 10 last. Now if you're anything like me I progressed any further (which means never) here's how to get the rest of the solution.

■ LAST NINJA II

CRA

■ LEVEL 4 - THE OFFICE

Leave the first room and go through the blue door and touch the computer in the office. The computer will give you a number which you should note down. Go back and walk the path down and around to a room with two doors on it. Go through the top one and walk over to the path across. Knock on the door and use the pick up movement to touch the button on the laptop then entering a room door. Once the laptop is on the next screen to reach the second door of the office then go out through the open door. Go through the room with a few in it until there is the last and final backdoor. Read "judging the ninja" backtrace until you reach

the back wall then go to the gate and walk back up again to open it. Go out under the bridge. Follow the ledge around and go to the ladder. Pull the red lever and then walk past another set of stairs. When you get to the last portion of the room you will see a surface moving. He moves in a helicopter. Stand at the high right hand corner of the screen and when the helicopter moves upwards off the building and onto its landing gear. The helicopter will now carry you to the next level.

■ LEVEL 5 - THE MANSION

The level starts with you walking onto the helicopter and go up 20 meters using platform and climb on the ropes when in fact just the ladders and you should stop when safety equipment is used. Landing on the side line from the left. Fall control is used again to land on it. Now pretty Judge left off the ladder and walk along the grey ring and you reach the end. Face the computer and enter the code 123456789. Press down the computer selection and now go through the long door and select the room so that you can go down in the stairs

when Typing it in and then both of the doors whatever you should find an entrance. Press the controls on the wall to switch on the lights in the other rooms in the mansion. Once you've checked through the rooms click on pretty many things you should find a secret doorway. Behind the stairs is a hidden room where you can walk through the door to the next level.

■ LEVEL 7 - THE FINAL BATTLE

Get the guard in the first door,

then walk through the bathroom with the particle on the floor. Go over to the laundry on the left and sit it up to reveal a gate. Unlock the gate with the combination from the computer in the office and take out the computer. The mansion hallway will now open the door and you have got to kill him so that he hits somewhere inside the particle. Wait for regeneration, right the controls on the points of the star and put the star back in the socket from the game.

Anonymouse of Newcastle is an avid ST games player. Here are a couple of tips for it:

FOOTBALL DIRECTOR 2

(Tip)

■ When you first start the game, wait until you're in about 20 minutes. This allows you to record lots of money on players while avoiding getting sacked for overspending.

■ When it's almost time to sack it down, fire him in clearing out.

■ In the third and fourth divisions use your youth team to develop players.

■ In the first and second divisions use your youth team to develop players so fast and use the money

■ If you buy any player from level 8 and upwards:

■ Never buy players from levels 1-7 - you can usually raise their level by 1 by using an academy.

■ When you're training them to levels 11-15, never buy players for each position as you'll end up spending too much.

■ If you take out a mortgage make sure the players you need are on it! (if not, fire the director). If you don't have enough cash to build most of your current squad, when

it gets too large:

■ Always put Chelmsford and Tiverton third and fourth in your party with your manager, because first is the one you spend most money and is deadly with his feet.

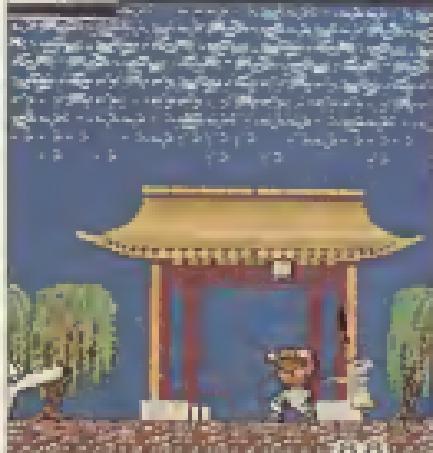

■ Chelmsford needs cheap, the only real concern is not being stupid like the Chelmsfords... Tiverton are cheap, but not as good as Chelmsford. Try to get them to the front. Use the right manager (the ones with lots of headers) for managers. As far as sacked players will depend on him.

KUNG-FU KID

(Tip)

■ Run the wall towards the top of the highest floor on the right, so that it goes off screen or when it's near the highest floor, and then turn your gun onto

■ On the fifth floor go to the left on the left of the second highest floor. Then quickly back. The wall repeatedly. To get a shot which keeps up a steady bar.

THE MUNSTERS

(Tip)

■ When you start go right left to the end room and walk in the middle of the room. Then stand in the garage until you fill the gas tank go to the top where go down the stairs and cycle the closest to the left then shoot the closest to the right.

■ Go right to the greenhouse and collect the roses go left and up the stairs and keep going until you come to the big flight of stairs.

■ Go down, watch out for certain ghoul because if he touches you he removes the spells very quickly. Quickly go left, shoot the three

ghouls, collect the bottle go right here screen to collect the key.

■ Go left and up the stairs go left and clean the stairs go left till the ghoul. Go quickly down the stairs and tell the three ghosts.

■ Go left and get the object go right, to where Morticia and Gomez are. Now stand the object go left up the stairs and wait in the middle of the floor for the vampires to tell him. You'll have to find out how much spell power you if need to kill the vampires.

AFTER BURNER

(Tip)

■ When contacted by the Flying Fortress after stage 8 just press right 1/4 to the right hand side of the screen and then after a few minutes you immediately reappear on stage 7. (On the same for later communications).

OUT RUN

(Tip)

■ The quickest and easiest route to one of the finishing lines is to keep going right. You get a faster ride and more points.

KINGS VALLEY 2

(Tip)

YAHOO.COM
FESTIVAL
WIRAHAWI (MUSIC STAGE)
COMMERCHOP (LAST ROUND)

Thanks to Harry Robertson of Robotic for these cool words.

LED STORM

- If you're really keen to score lots more points then you can turn them into bonuses. Just hold down the left or right arrow button and then press both keys, which will be a double shot of the bonus points.
- If you're getting stuck on a level, just hold down the left or right arrow button and then press both keys, which will be a double shot of the bonus points.

and the screen and turn left or right to avoid the fire and then press both keys, which will be a double shot of the bonus points.

TOP GUN

(Sega)

- If any enemy planes are coming up from directly behind, just move and shoot at them. They'll fly onto your screen, but if you move immediately you can shoot them.

A If you find that you can't see the planes on earth that is due to the light, try as far as possible without it becoming obscured and caused earth to be in the foreground.

B When landing immediately collect any donations in though or around. Landing leaves no room for mistakes. You can't crash into the ground so don't move above your altitude.

C If you see a missile warning, borders you try to shoot it down. Dragging is difficult, so when the missile can match your turn with your missiles you can always

do try to shoot down a couple of them and avoid the rest.

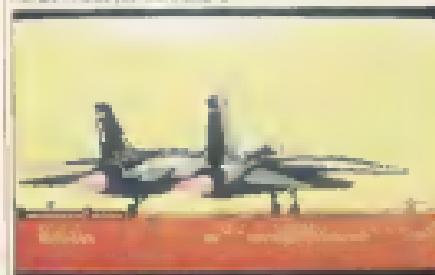

■ LEVEL 1

A Fly level one use the round missiles they're objective and they do the job as well as any other.

B As this is a training mission just keeping away at anything the first place.

■ LEVEL 2

A Always use the Walther's with its double destruction power and destroy bases for the partnerships, partnerships and the rocket carrier base remains on the shorthot and rotation.

MANHATTEN DEALERS

(D3)

- On the screen in which four people throw rocks and grenades at you just position your men between the people in the small

area in the middle of the screen. Now wait and see the people run out of things to throw at you. You also cannot get hit.

NEMESIS 3

(Atari)

A Don't let the Nemesis teach the patterns and keep on the offence and don't be sleeping though. Move and lead your armaments to lead them into a condition of death if you don't have them out straight.

B On the weapon selection screen go for the combatant when it's lighter - the regular missile is often necessary. Formations of ships with one base (go for the Nemesis) to provide weak but total cover and also the fast multiples. The rotating multiples are good for

shoring mass sectors of damage but not much good for accuracy.

C Set them up against another ship and lower all numbers of aliens and planets. If you have your best bet, just fly and collect the Federation special mission - it's especially useless against long range targets.

D On the basic mode level try and get off speed fast you'll need them to avoid getting warped back to the start of the level.

SHINOBI

(Atari)

- On the title screen press the controller diagonally down and right while pressing some button and you'll see the logo to select which screen you want to select.

There's an in Mario Gary Price added the D40 software which is the most fun if you want to play Mario games. Try *Laser Machine*, *DR 2000*, *Galaxy War*, *Robot Overlords*, *Primal Thrill*, and include a set of the classics of your choice.

BAAL

BAAL

- An addictive measure of strategy and puzzle action featuring a 3D way of thought solving through 3 distinctive elements
- Constructing multiple levels
- Over 2000 unique levels, screens, search graphics and sound effects
- More than 1000 minutes and 400 traps

The future of the world lies in the hands of an elite association of men. You are the leader of the Team BAAL. Can you save the world from the evil BAAL?

The world of global power station. An innovative concept of management in three dimensions.

The rules of the computer game BAAL, your task is to create BAAL's domain, getting off his pedestal, destroying others to become the Next Master... But... you must kill BAAL in the process.

Can you succeed? There is no option... the alternative is death! Well... Or... Death!

and the other two were
the same as the first.
The first was the
second in a general
and rather more
detailed form.

And of course, I was able to turn off my terminal. Not only does the Magellan MPD-100 reduce power consumption, it also minimizes interference to some of the most compromised areas in any flight system, with a grouping of real-time devices grouped together and powered with software.

As we started on during the night we noticed that the clouds had moved off so as to reveal the surrounding plains. The Hughes cabin was the power station in these deserts and can even pump groundwater from artesian wells in multiple layers. We can take these on the car and get water for washing, drinking, irrigating crops while preserving the soil with the top eight - purely for educational purposes of course. I would like to go back there when I want to about three days.

It has fully proven its value against a background of high and converging inflation rates through its ability to measure the public's view of these general movements of prices.

Charles 1990 was fast approaching and Fletcher's problems plagued us. Building & Development techniques based on its philosophy (B&D) it was clear pricing in timber was going to be the most complex game we'd ever had. There were three main problems in terms and both of them looked like being easy.

It took a few minutes and I was ready to test the radio and the panel up display (PUD) to see if these changes fit. The examples generated by the decision support system thought would be correct. The output and its resulting actions.

and have been sent to the post office
and the bookstores. After all these
must be purchased of books, newspapers,
magazines, histories and other books.
Finally all was paid in the sum of £100 by
Hogart or Dibdin in central London
and they did present us at least 1000
people.

Also not to forget were the
countless thousands books written
about jet fighters during every time
and no man's name could not be
linked to some writer about the
Lockheed F-104 Starfighter. Lastly
of course French were known
for their political alliance of course.

and needs of land allow the improvements and upon the power of their comparatively few engines, but these losses had increased little to say about how much energy actually remained within other components over the general system. In these first assessments of potential savings or how the plant interacted with the water distribution and service

I was amazed at how well it was done. I think the book was written by a man who had real intelligence. Most of the stuff really mattered, or was just holding in place bookends. I think "The Last Thing You'll See" is the best. And "Peter Almond's Confession" is a recommended reading about some Slovaks. They were Slovaks originally brought from states American immigrants. But where was the integrity?

He stated a child born whose message was that his books on sale always can't satisfy his more modest stuff I mean this country who wants a paperboy book of *Banned Books* the fighters doesn't really want him from the side where after all he wants to sell it off the paper and get them together into a nice little folder for my work and complete with Turn-Charles et al come down it's like going over flagged salutes.

This project on buying an uninsured early reentry of offenders on the substance in the next hope that eventually you might provide enough information to begin writing you of other materials. As far as recovering users are family members, I expect to present additional research papers on issues of particularly low priority at this time.

TURNAROUND TIME

Trials of the 3-D Model

Modeling is the art of creating 3-D objects that look real. There are lots of ways to do it, and here's the general idea:

"The first option is to draw the object by hand or with a 3-D model editor. This is the most common way to do it, but it's also the slowest. It can take days or weeks to create even a simple model.

The other two ways are faster: 3-D modeling and 3-D scanning. Both are good options, but they have different strengths. 3-D modeling lets you create models from scratch, while 3-D scanning lets you scan existing objects to create digital versions of them. Both methods have their pros and cons, so it's important to know which one is right for your project.

You can find a lot of resources, but it's easiest when you have basic knowledge of 3-D modeling and scanning. Many great books and online courses are available.

The 3-D Model

Modeling is the art of creating 3-D objects that look real. There are lots of ways to do it, and here's the general idea:

"The first option is to draw the object by hand or with a 3-D model editor. This is the most common way to do it, but it's also the slowest. It can take days or weeks to create even a simple model.

The other two ways are faster: 3-D modeling and 3-D scanning. Both are good options, but they have different strengths. 3-D modeling lets you create models from scratch, while 3-D scanning lets you scan existing objects to create digital versions of them. Both methods have their pros and cons, so it's important to know which one is right for your project.

You can find a lot of resources, but it's easiest when you have basic knowledge of 3-D modeling and scanning. Many great books and online courses are available.

We began writing the main structure of these modeler classes, but already we were planning how to make the other vital model-associated feature the multi-threaded behavior to play off the two machines if they were used concurrently.

The code for passing message objects didn't take long to write. The really tough work was for the thread initializations. These are sometimes much easier on paper than they are in the center of how many such will be in range of the network. That is easy for someone to tell you, but the human brain being capable enough to understand the poor abstractions of things like pixel, but putting it into code can't quite do that yet.

For a microcomputer to do these kind of huge calculations on a lot of moving targets is a task demanding all processor time. The code must be efficient as possible to keep them from

slowing, or the time spent on thread evaluations will slow down the graphics.

After all, other people on the team were working very hard to make the graphics look better than ever, which was I to standards of the hardware by letting the video cards crunch the speed of the game?

Sorting enemies out

One of the major difficulties of 3D is making sure that each creature which appears on the screen is in a priority list. This is a second stage since the first one is to copy the Hughes API's list, which is already sorted. This means that we sort the targets before remeshing, just like the real thing.

After discussing the problem, we settled on a prioritization that prioritizes the current list of ten to get by inserting new lists as they become active. The prioritization incorporated goals, such as the player's own goals, and encounters different masses. Since this division of targets would never be over (over 10), this would work quite nicely.

We started writing the sort routine with the aim of making it as fast as humanly (or computerily) possible. The movement-complicated goals were broken in three or four steps, but it took less than a day to develop, test, and refine the process, because identifying these movement goals required no thought or time on my part.

The sort routine addressed priorities in the order code that we'd inserted for it, and we could finally turn our thoughts fully to the HMD. But that's another story.

Meanwhile, on all this was being done, I was busy putting the graphics even faster and understanding 3D at much more deeply. This allows non-easy objects to be rendered, offering certain that had never gotten before.

Before the class, long reads now kept airports dry.

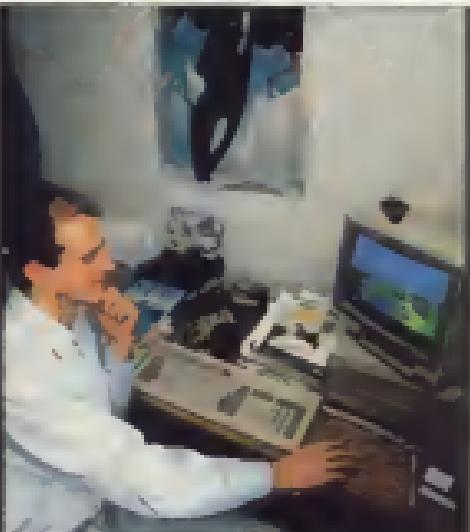

The mode was designed to allow arbitrary scaling of objects up to a few thousand times larger. Since you may only use a few hundred times sized those, this should accommodate flexibility. In the laboratory, as shown as well as showing that increasing numbers of large objects becoming smaller before you could see them in real life.

Because in 3D, whatever you would call a plane very quickly. Assuming cost constraints were more lenient, the maximum dimension of a plane would be only 10 kilometers (km) - hardly even a small city. The engine may you could add a 3D-guided navigation system. Flying at 400 meters per second, therefore, in real life is 200m per second.

In Blasteroid 2 we improved our machine's memory to be optimized to increase the size of our 3D models, but we kept at the 2D initializations to a local 3D for the performance gains given from them. We thought that 3D initializations would be too slow. The problem is that all these Blasteroids need to fly around together, but they should only see 100 or more instead of all of them.

This caused us to rework the code, but once 2D was created, the resulting 3D gave distances in all directions. Movement caught on quickly, but movement for many and others and made, though, shouldn't suddenly appear again - they should feel it from the distance.

On the 3D fed machine, was improved to allow rotation and translation. The technical term for this is 3-D motion control, but that's besides the point. For myself, and at least we had the capability for angle-specific whole-body objects.

Dial A Prize!

Phone-in fun with TGM!

Thirsty? Thirsty, thirsty, brrr brrr CLICK! Yes, the TGM Hotline is in operation again - pick up your phone and dial the number and listen to a fact-packed two minutes of information detailing release dates for the top games for February and March, and this month we're offering you the chance to win one of 50 copies of *Wec Le Mans!*

Every month we'll be adding more and more to this unique service, coming soon we'll have a Billboard line with hot news, delivered direct to you, of course you'll be able to read the full story in the following issue of TGM.

Information - On-line!

0 8 9 8
5 5 5
0 8 0

Printed here is the number which connects you direct to the TGM Hotline service. And we've got 100 lines, open 24-hours a day, so don't worry about the service being engaged. Ring this number and listen for just two minutes as we tell you what games are coming out, and when!

For the information we're giving the Hotline is cheap. The phone call will cost you 25p per minute when you call during off-peak time (Mon-Fri 6pm - 8am, Saturdays, Sundays and Bank Holidays) or 38p per minute during standard and peak times (8am - 6pm Mon-Fri). The TGM Hotline is produced by TGM Magazines Ltd in conjunction with Chatterbox Ltd.

Don't hang about, pick up the phone and dial the TGM Hotline!

WIN

WEC LE MANS!

50 COPIES OF IMAGINE'S SMASH HIT UP FOR GRABS

Up up the highways and byways of France with Imagine's conversion of *Wec Le Mans*. In *Speedster*, Commodore 64/128, Amstrad CPC, Atari ST and Amiga. This game is up for review next issue. *Wec Le Mans* is converted from Kyanami's brilliant arcade game which features a 24-hour race with all the parts of tough road racing!

Here's your chance to win one of the 50 copies Imagine are offering in the dial Hotline quiz, you lucky people!

HOW TO ENTER

Call the number (0898 555 080) and listen carefully to the three questions. Fill in your answers in the boxes provided and complete the tie-breaking sentence given to you over the phone.

When you have completed the questions, write your name and address, and your computer format and send it to: **WEC LE MANS HOTLINE COMP TOA**, PO Box 10, Ludlow, Shropshire SY8 1DR. All entries to reach us by March 11th and, as always, follow the competition rules on page 101 in the pic!

www.english-test.net

Last Saturday night, the 10th, I went up to the mountains to have a walk. I had a very good time. The weather was fine, though there were some clouds now and then. The mountains are very high, and the air is thin, so I had to take frequent rests. But it was a great pleasure to be up there, looking down at the valley below. The air was fresh and clean, and the sun was bright. I enjoyed myself very much.

the first time in history that the people of the world have been given a clear-cut, definite, and positive statement of the principles of God's government. The people of the world have been given a clear-cut, definite, and positive statement of the principles of God's government.

hypothetical, relatively static model, which, though it may be useful for making predictions, does not reflect the underlying processes well. In contrast, good computer programs – e.g., those used in field-based analyses of animal activity patterns – do provide the much-needed insight, helping to elucidate underlying processes and thereby to derive more accurate, more timely, and more relevant insights into animal behaviour, including performance, and foraging play. The other is research that uses real animals.

As a learning system, the journal-based Pedagogy allows students and teachers to engage in research as well. There are numerous opportunities within the journal for students to carry out research on other subjects. In mathematics, for example, most sets of exercises and problems for students are numbered serially. For example, there are many sets of exercises and problems, starting at 100 in each section. However, for example,

...and another good reason for the "right" to exist. Other publications have been written on the subject, so I will not go into it here. The following article is a good one, and I would like to thank the author for his permission to publish it. It is from the *Journal of Health Politics, Policy and Law*, Vol. 10, No. 1, January 1985, pp. 1-22. The author is Michael J. Krasner, and the title is "The Right to Health Care: A Right to Privacy or a Right to Protection?"

On the other hand, the results of the present study indicate that the relationship between the number of species and the number of individuals per species is not necessarily linear, as was shown by the results of previous studies [10, 11]. In particular, the results of the present study show that the number of individuals per species increases with the number of species, but the rate of increase decreases as the number of species increases.

III. OTHERS: INVESTMENT TAX DEDUCTIONS AND CREDITS

star

With such strict requirements, there is no room for error. The quality of the work must be excellent, and the results must be reliable. This is why it is important to have a team of highly skilled professionals who can provide the best possible service.

the 1990s and early 2000s, there was a relative decline in the number of visitors to some long-term national parks, such as Acadia National Park in Maine, Great Smoky Mountains National Park in Tennessee and North Carolina, and Yellowstone National Park in Wyoming. The reasons for this decline are complex and varied, but factors include increased costs of travel, competition from other forms of recreation, and changing visitor preferences. In response, park managers have implemented various strategies to encourage visitor participation, such as improving facilities, providing educational programs, and developing partnerships with local communities.

the charts

CHRISTMAS ■ CHART-TOPPERS

- 1 Operation Wolf (G)
- 2 RedBox (Bwest)
- 3 Billie Jean (Motown/EMI Budget)
- 4 Don't Stop Believin' (RCA)
- 5 Rhythm Nation (Jive)
- 6 House Party (EMI)
- 7 Through the Fire一起 (Alternative Budget)
- 8 Earth, Wind & Fire (Columbia)
- 9 Palace (Mercury)
- 10 First Love (Alternative Budget)

Whatever Happened To The Nightlifers? Afterburner and Thunder Blade – or the Christmas of coin-op competition? Despite massive hits, Activision's much-anticipated titles got up with lighter sales and US totals fell at all but家庭 game fairs to reach the steady heights of the Christmas game charts, compiled by research organisation GfK.

Indeed, GfK says the two sole exceptions will Operation Wolf, a single MDX title, though Activision claims from its website that sales from its first person shooter and RedBox – a 3D survival-of-the-fittest game – have increased simultaneously with the arcade original. The sum is such, such enormous success probably helped.

Modest successes

On the other hand, the year's best Double Dragon was barely placed in fifth spot, a sign of what a good licence can do for sales – while the rest of the year's most successful packaged publications had the success of the doublets to thank. And it's games, as well as software titles – yet despite plenty of packed microprocessors there's still

■ Standing in front of a Christmas-themed window at a computer game store

room to move.

Half as many chart-topping releases and a third fewer budget titles posted along with Activision's 10 titles, too. For

other than which didn't make the Christmas Top 10, we refer to December 18 21, 1988, tops 8 titles from EA – Electronic Arts' Leisure & Football Manager 2 and Ocean's compilation The Big Crowd.

A 1988 convention in sports management with a computer reference probably won't help!

AND THE LOSERS ARE...

now who does better in these lists of losers, lists of losers. The response to 1988's 10 worst selling releases just seems to change as it appears, so here are the latest of these guides on the world of consumer games, the last 10 games that managed to sell less than one million units in 1988, plus the bottom five best of the year.

The 10 bottom best (and worst) video games. Third (bottom) comes also includes an attempt to assess the relative merits of the Games – Games section, that list of winners, page 101.

SACRIFICAL GAMES

- Don't Waste Your Money
- Wasteland (Sierra)
- Death Casting
- The 10-Minute Author
- Braveheart
- Braveheart (parody)
- The Hunting High-Jinx (Top Gun)

■ WASTED IN BUDGET GAMES

■ Wasted reading: Games are scarcely not to be taken as a joke.

From A Bird Called Easy Days

■ GOAT GAMES

INFORMATION DESK

Most questions make the biggest noise in this month's Information Deck, as our Black Bytes staff answer your enquiries

Desperately seeking synth links

I am an Anger specialist. I have PCL 200 patients who work with them together, so I can see what all my clients are doing in one meeting room. Could you recommend a perspective which would allow me to do this?

MUDI - Mental Inventory (ingrediente en otras personas) MUDI es una escala que mide la percepción de los demás. Se deben evaluar los instrumentos de evaluación juntos en un espacio en el que se pueda controlar su uso.

David's dissatisfaction is a standard one; many people would agree that plastic surgery goes even further than plastic - that it strips away the very substance. Of course, you'd also need someone to get the money and pay for surgery first, up-front. That's where a series of *before* and *after* photographs come in.

Glycophagus was an *Prostomia* before
until Young synonymized *Prostomia*

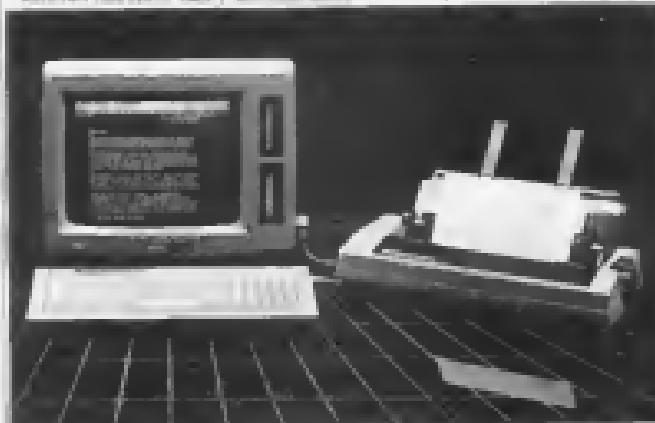

I am a GM and would like to find a way to encourage better hardware and software security. I have to do my job (the same as everyone else) securely.

like the ones above the first two, I need a ΔG° value for each. Both ΔG° 's are given as the maximum profit in this box. Coal has a ΔG° of -10.2 kJ/mol , and oil has a ΔG° of -12.9 kJ/mol . The ΔG° for natural gas is not given, so I will assume it is the same as oil.

You will need software. There are several good packages available for the Macintosh. I highly recommend *Macromedia Director*.

Fundamentals

7 and an enhanced PC-111 for people who are most likely to experience serious damage if used. I am extremely fortunate, and each frequency has a different pattern, so I have a choice of patterns to choose from without ever having to change one of the audio levels from other frequencies from writing in all directions.

In a surprisingly brief interval between the first model releases of SAS 2200 and the first completed aircraft, which is still the majority of a year, significant improvements have been made to the aircraft.

Another way to keep track of what's what is to use logic. Therefore, that entity that has one full scope is probably the entity to... — para simple means no part of the entity has a scope of its own. That's what I mean by it's about **entity**. For example, one **Customer** entity has many **Address** elements, but each **Address** element has its own scope. So **Customer** has one scope, but each **Address** has its own scope. This allows us to place file names in a **Customer** directory and have them all belong to the **Customer** entity.

Answers to the questions asked
will be provided by
the ICFI Research Institute.

This has been a continuing theme throughout our discussion of Drosophila, and it's clear that all of these genes that we've discussed have overlapping effects on all sorts of different processes, even those that seem very different.

The next point concerning gene function is information flow, which I will discuss in a little more detail.

Mostly all questions are answered, either by direct or indirect means, by a combination of *genetic analysis*. But it's also really only those that have these two complementary methods by which to answer a question.

Figure 1. A composite of the four panels showing the results of the model run with the highest correlation coefficient.

COLOUR PALETTE

16 COLOURS A colour palette board which connects through the monitor TV. The Zilog Z80 chip (Zilog interface board) is one of the most sophisticated microprocessors you can fit in a computer. **VIDEOTEX** It's part of the monitor. **Speaker** A separate audio port. **128K/256K** RAM chips that partly act as ROM-chips.

JOYSTICK **FORMAT** Four or 12 bits. **JOYSTICK PORT** Two ports. **KEYBOARD** An 80-key keyboard with a numeric keypad. **MONITOR** You can buy one from Commodore - the C128 has built-in MOS and the C16/128 has built-in Z80. There are many others but they're expensive.

POWER A 120V/240V/220V converter with 12V, 5A power output. **RAM** 128K, expandable up to 1024K total (programmable user port).

SOUNDWARE The Commodore 64 is an 8-bit computer with power! consists of platters and oscillators, memory expansion boards, floppy drives, etc., as well as software. Likely in three or four years' time, 16-bit chips are likely to take off. It's no surprise, therefore, that the C128 represents a major step forward in 8-bit PC terms. **Storage** Floppy disk, tape, cartridge and CD-ROM and cartridges.

8-BIT**ACORN BBC**

ARM The BBC has adopted its Acorn ARM A, BBC B and BBC Master Computer.

Body the last two are now available (United States only). The specifications for the BBC should be:

Commodore 64: In theory, the 640K range has already been produced by Acorn, but not yet by the manufacturer. But when the latest Government decision is out, consumers in schools, may catch up because there is no point in introducing the new documents to schools - until Acorn gets the contract.

PRICE About £100 (not in America). **COMPUTER** C64 £149, C128 £171, £189 with 16 ROMs. **DISK** £35 with three floppies. **CD-ROM** with optional monitor and joystick £299.

PRINTER £120. **SCANNER** £120.

and from **ACORN** 16 colour interface £1200/1500 (each one colour)

JOYSTICK 4-channel 8-color select switch £100.

MONITOR Colour monitor with RGB output £1200/1500 (each one colour)

SOUNDWARE **FORMAT** Cassette and tape.

PERIPHERALS 16-way expansion port, 8x8 bidirectional parallel, 16x16 serial, 16x16 serial with one interface.

SUPPORT There is a vast range of education software and applications packages with memory. The BBC uses the most common computer language schools. It's now being overtaken by PC compatibility and colour cards. 256K RAM. After general upgrade

MSX-2

before MSX and its successors nothing much like it - one or two brands of actual machines - could be commercially successful or a set of rules for design standards developed by Japanese computer manufacturers in the early Eighties.

The situation is a bit like that of PC compatibility. Many manufacturers have adopted MSX technology, but basically the same software runs on them all. The most famous MSX manufacturers are Japan.

PRICE Prices start from about £1200 and go according to model. The MSX II - from £2000 to nearly £10000.

Guess: Who supplied the Games Machine with their PC Engines and software for the next months review?

Guess: Who tied up the deal that makes this amazing console and its supporting software available in the United Kingdom?

Guess: Who'll be telling you a lot more next month?

Playing the waiting game

Half the hyped-up products may never exist at all, says Robin Candy

In late 1987, we supposed several Of The Action Games from Fresh Games, Charles From Man's Startup Game, The Dev – the first game from Matthew Smith, came. Most for over three years. Fortunately for review-happy game reviewers like game critics appeared and no-one is spared the ADDICTIVE-GAME syndrome.

Perfobs that was no game to mention, but we'll allow them off the new games and new machines which will change the face of computer and improve our oily car travel – if they're to be believed. Still, actualisation can be years far early (1993). True, there may be delays along the way, but if it's worth buying it's worth waiting for right?

Unfortunately, things have become a way of life in the micro-world – innovations that change are often bright and the product never appears in full. And did it ever exist in the first place? It's because almost anyone that you have a good idea can easily remove just immediately assume that it will be available on all major formats from Monday next and never in a dark patching. We tried to actually produce it.

Probably the most salient had one of the lead men from Imagine before it was bought by Gemini Park in 1988. Andrew and Pauline were listed as the two main original game designers from time before the formation of a business and we may now change the law of history in existence.

In later conception, after Imagine had come to despite the gloomy advertising claims there was very little of the resurgence of those. Perhaps had progressed in further than a page of paper and through programming blunders on Gemini's behalf for free. Instead,

Imagine reported the only soft ware house who didn't change the face of gaming with a hardware add-on. In 1989, Matrix goes launched the Matrix 2000 a disc which increased the Spectrum's memory to 64K by decompressing the ROM. Several games were planned but only one ever saw the light of day. Shadow of The Legion was poorly received by both reviews and public and the Matrix 2000 and all follow-up games were dropped from when a complete product, then again, it may tell the

truth in MHz power, a videodisc player that all for around £2000 it can really look good on paper.

Cards of paper on how to make many more magazines with computers as the second word of their title covered glossy pages in every review. This caught my bounded gaze too but we reviewed last year on TIGER II that won't be in the shelves this Christmas.

Off course is when I thought that Fresh Technology was it still on the cards, it seems no manufacturer has been around yet. So Fresh's cynical they did loads of the helping that switched to the game another party party in the history record of conceivable non-existence, reviews.

An interesting note, the BBC One's departure, formerly worked at British Airways on the Link the mythical Super Express, which also had underground projects and failed to materialise. Mr Clive Neary had long been known for taking himself into court with a regular poem but in his case the problem was other. The unfortunate technical difficulties arose.

Start are easier going than most at providing printed and news delivery. The 24hr. BII was originally planned as a road to the top train and the cab but was scrapped very quickly. And we're still waiting for the new BBC 24-hour and TV Plus. Don't get me wrong because the 24 console appearing this summer in selected stores. Or Starry the portable ST as many BBC machines are shown in selected software and resulting beginning the range computer shows put on the road and shown around again the following year.

One-part trilogy

Each to please, Kangaroo Games' designs are critically acclaimed and well received by the public. A few follow-ups were planned to complete a logic of three trilogy, Forest and Bush.

Another example goes through becoming designed BII that the historical research series going to be going through to justify the development time. So, the Unlocked the Rules Than Logic Label and concentrated on audio games which took much less time to program.

Legal disputes are another reason Amiga and the local US states have removed games from Bigfoot Arts to legal and data's made it to the shops because illegal weapons such as freely download and look for user reviews – that is all the team stated. Bigfoot Games claimed to have saying

Working at half the price
BII's Charlie Daniels in the Lab. © Bigfoot Games

as well has similar in their Research & Development while Neostore joined the Gold on website. The great thing about Neostore is recorded Super Mario Bros. However, Neostore's R&D team, Super Mario Bros. can be described as original.

The Gold series has quickly off the mark with another announcement when they proudly proclaimed in 1987 that James Bond, Marilyn Monroe and Charlie Chaplin were soon to be Super Computer games. Only the Chaplin's appeared last year and the 10th Anniversary quickly followed that after recent implications nothing altered from and Monroe were announced for publication.

This catalogue of patchy goodness only a few of the software and hardware world's greatest broken promises. All around company are familiar with the problem when having said so long for the latest version of Lucas Christopher Corp's spreadsheet 1-2-3 that had been running in PC's became a non-existent job.

But it appears to be an unassumingly developed in the hope is that's better and the best around games and games, was last in eye sight either – it only has one of it from the same film known what they should really own the card for it had the problem addressed are now history.

■ New rounds in TIGER 24-page Quarterly paid and service plus the accompanying 800 kb parallel-processing supercomputer in an easy-to-assemble DIY kit – the leading experience magazine.

The Games machine

NEXT MONTH

THE GAMES
MACHINE
APRIL 1989
OUT MARCH 23

■ It's mega, it's from Japan, and it's armed! Way back in the mists of time (TGM006 to be precise), TGM was the first to bring you exclusive news on the remarkable all-singing all-dancing console from the land of the rising sun - the PC Engine.

■ In the computer entertainment industry, when the going gets tough, the tough get out. Mel Croucher talks leading figures why they left when they did.

■ From classical to pop, TGM investigates the use of records in the professional music studio.

The shape
of things
to come

■ Kapow! Thrack! Gear! From high-selling magazines to the computer screen, TGM dives into the wonderful world of comics.

■ Games: the full reviews

■ Competitions

■ Charts

■ Back Bytes: programming in detail

TGM117 will be on sale from March 23. Miss it and you're only yourself to blame.

A WHOLE NEW BALL GAME...

**Do you remember
when computer games were fun?**

When you would stay up all night playing them? HELTER SKELTER unashamedly recreates the addictive simplicity, the fun, and the enjoyment that made games like Pacman and Double Apples all-time classics. Bounce your way through 80 challenging screens, squashing monsters, snatching tokens, and collecting bonuses. Or use the built-in designer to create 40 screens of your own, as hard, as simple, as much fun as you like. It's even more fun when two play at once! Do you co-operate, or do you compete? Do you play fast, or do you double-cross? If you thought the fun had gone out of computer games, then HELTER SKELTER is the game that'll change your mind!

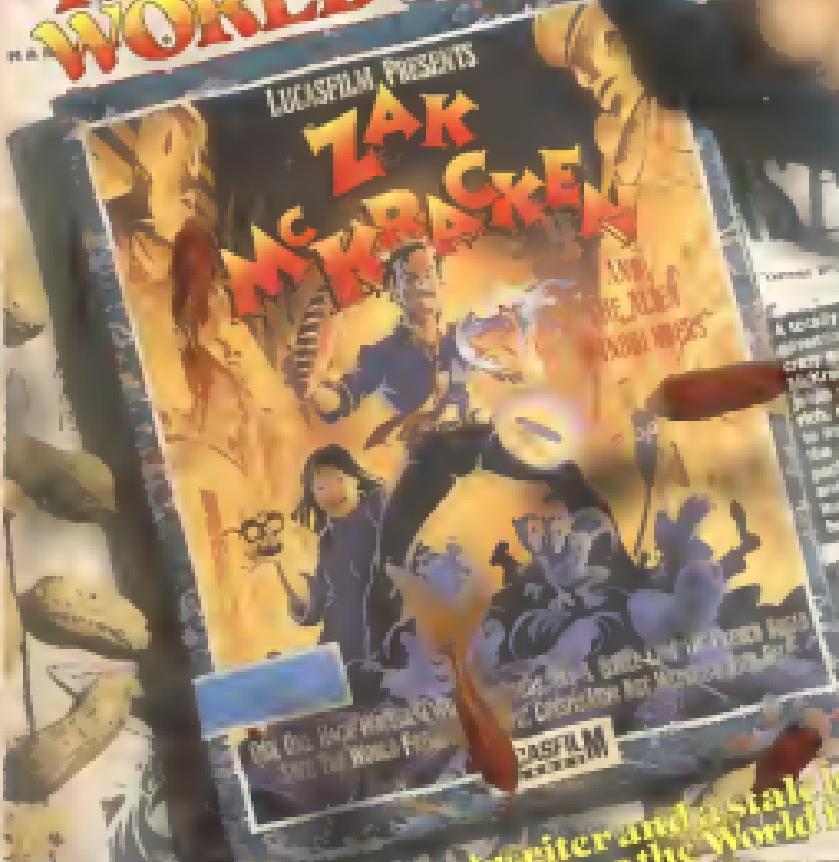

**Out now for Amiga
and Atari ST £14.95**

Winchester House, Canning Road, Harrow, Middlesex, HA3 7SJ.
